Evaluation of Bisphenol Release in Saliva after Remaining Adhesive Removal in Orthodontic Patients Using Ultrasonic and Rotary Systems

Protocol summary

Study aim

Determining and comparing the amount of bisphenol A in saliva after removal of residual adhesive with ultrasonic scaler and rotary system

Design

Clinical trial with two parallel groups with different interventions, single blind, randomized, phase 2 on 40 patients. Randomization is done using Random allocation software (RAS).

Settings and conduct

In this study, 40 patients referred to the specialized department of Tabriz Dental School who receive fixed orthodontic treatment are randomly placed in two groups of 20 people. All patients with metal brackets and Light Cure composite and bonding will be treated. After the brackets are debonded with a plier, by the method of pulling the brackets through the plier, removing the adhesive residue from the surface of the tooth in the first group will be completely performed by an ultrasonic scaler and In the second group, first by a turbine with a carbide cone bur machine a large volume of adhesive will be removed and then the residual layer near the enamel will be removed by a low speed handpiece with a tungsten carbide bur. Then, using a calibrated pipette, 1 cc of saliva is collected from the vestibular buccal and sub lingual areas and stored in glass vials. High-performance liquid chromatography / mass spectrometer will be used to determine the level of bisphenol A.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients with at least 16 bonded teeth.
Exclusion criteria: Tobacco use (chewable and absorbable); Liver disease; Kidney disease; Taking drugs containing phenolic compounds.

Intervention groups

The first group: removal of adhesive with a rotary system
The second group: removal of adhesive with ultrasonic scaler

Main outcome variables

The amount of bisphenol identified in saliva

Scientific title

Evaluation of Bisphenol Release in Saliva after Remaining Adhesive Removal in Orthodontic Patients Using Ultrasonic and Rotary Systems		Street address Department of Orthodontics, School of Dentistry ,Golgasht street ,Tabriz
Public title Evaluation of Bisphenol Release in Saliva after Remaining Adhesive Removal in Orthodontic Patients Using two different methods		City Tabriz
Purpose Supportive		Province East Azarbaijan
Inclusion/Exclusion criteria Inclusion criteria: Patients with at least 16 bonded teeth in the mouth Exclusion criteria: Tobacco use Liver diseases Kidney diseases Taking drugs containing phenolic compounds		Postal code 5157955359
Age No age limit		Approval date 2020-06-01, 1399/03/12
Gender Both		Ethics committee reference number IR.TBZMED.REC.1399.186
Phase N/A		
Groups that have been masked <i>No information</i>		Health conditions studied
Sample size Target sample size: 40 Actual sample size reached: 40 More than 1 sample in each individual Actual sample size in each individual: 20 20 patient in each method		<u>1</u> Description of health condition studied Evaluation of bisphenol identified in saliva of orthodontic patients after debonding with two methods: Rotary system and ultrasonic scaler
Randomization (investigator's opinion) Randomized		ICD-10 code ICD-10 code description
Randomization description Randomization is done using Random allocation software (RAS) by writing the number of groups and the sample size in the specified field and clicking on the generate random list option gives each sample a code in which The group is placed. Allocation concealment as Sequentially numbered, opaque, sealed envelopes (SNOSE); is. The sealed envelopes are given to the ward secretary and she registers the patients		Primary outcomes
Blinding (investigator's opinion) Not blinded		<u>1</u> Description The amount of Bisphenol
Blinding description		Timepoint End of treatment
Placebo Not used		Method of measurement high-performance liquid chromatography/mass spectrometry device
Assignment Parallel		Secondary outcomes empty
Other design features		Intervention groups
Secondary Ids empty		<u>1</u> Description Intervention group1: Removing the adhesive with ultrasonic
Ethics committees		Category Treatment - Devices
<u>1</u> Ethics committee Name of ethics committee Ethics committee of Tabriz University of Medical Sciences		<u>2</u> Description Intervention group 2: Removing the adhesive with rotary system Category Treatment - Devices
