Evaluation of the therapeutic effect of Acupuncture as a complementary treatment in patients with Trigeminal neuralgia under medication treatment

Protocol summary

Study aim

Evaluation of the therapeutic effect of acupuncture
Evaluation of the therapeutic effect of acupuncture for the treatment of patients with Trigeminal neuralgia

Design

Clinical trial with intervention and control groups in two groups of 8 people, with parallel groups, two-way blind, randomized as an individual block, the random function of Excel software was used for randomization The phase for this study does not apply

Settings and conduct

This trial was performed in patients referring to Al-Zahra Hospital affiliated to Isfahan University of Medical Sciences. Acupuncture was performed as a supplement to drug treatments. The intervention was performed on the main group and the placebo, which was the usual needles, was used to blind the control group. Participants, researchers, outcome assessors, and analyzers are blinded.

Participants/Inclusion and exclusion criteria

A person with typical symptoms of Trigeminal neuralgia includes sudden, unilateral, shock-like pain in the path of the Trigeminal nerve branches The person who with Trigeminal neuralgia undergoing drug treatment

Intervention groups

Perform acupuncture method in the intervention group
Use the usual needles in the control group and apply pressure to the skin

Main outcome variables

Patient pain according to VAS criteria

Scientific title

Evaluation of the therapeutic effect of Acupuncture as a complementary treatment in patients with Trigeminal neuralgia under medication treatment

Public title

Evaluation of the therapeutic effect of acupuncture as a complementary treatment in patients with trigeminal neuralgia under medication treatment

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

A person with typical symptoms of Trigeminal neuralgia includes sudden, unilateral, shock-like pain in the path of the Trigeminal nerve branches. The person who with Trigeminal neuralgia undergoing drug treatment

Exclusion criteria:

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

- Participant
- Investigator
- Outcome assessor
- Data analyser

Sample size

Target sample size: **20**

Actual sample size reached: **16**

Randomization (investigator's opinion)

Not randomized

Randomization description

Blinding (investigator's opinion)

Double blinded

Blinding description

Participants were blinded by contact of the needle with the skin as a placebo Patients' names were given to the out of study operator, who were randomly divided persons into two groups and each individual was assigned a separate code and provided with clinical care. After the intervention, the codes assigned to individuals In order to examine the consequences and the necessary analyzes, it was provided to the researcher and the evaluator of the consequence

Health conditions studied

1

Description of health condition studied

Trigeminal neuralgia

ICD-10 code

G50.0

ICD-10 code description

Trigeminal neuralgia

Primary outcomes

1

Description

Patients' pain according to VAS criteria

Timepoint

Measurement of pain at the beginning of the study and after the end of the intervention after two weeks

Method of measurement

VAS criteria

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: In addition to previous drug treatment acupuncture was given once a day for 3 times a week for at least 2 weeks. Acupuncture was performed by an anesthesiologist who is proficient in this Method. Thin, disposable sterile steel needles were used. The needles were held in the muscle until a tingling sensation, such as numbness or electric shock, was felt in the area, and then remained in place for 30 minutes.

Category

Treatment - Other

2

Description

Control group: Continue previous medication and use regular needles to apply pressure to the skin
