Effects of Balance Training exercises for Improving Static and Dynamic Balance in Deaf Population

Protocol summary

Study aim

The aim of this study is to determine the effects of balance training exercises for improving static and dynamic balance on the deaf population

Design

double blinding, randomized control trial with parallel group design of 30 patients

Settings and conduct

The participants will be chosen from Special education school, Milat town Faisalabad. Double blinding in which participants and assessor both will be blinded.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Congenitally Deaf children, Aged between 6 and 11 years, With profound hearing impairment, Without cochlear implantation, Ability to understand simple instructions, Ability to stand and walk independently. exclusion criteria: Mental illness, Visual impairment, Cognitive impairment, Physical impairment, Neurological condition, Cardiovascular conditions

Intervention groups

The subjects will be divided into two groups randomly by chit and draw method: control group and training group. Group A will be training group (n=15) followed the balance training exercises for 4 weeks and group B will be control group (n=15) carried out its daily activities normally as usual.

Main outcome variables

our primary outcome will be to maintain the balance of subjects as much as they can do by performing exercises.

Sample size

Target sample size: **30**

Randomization (investigator's opinion)

Randomized

Randomization description

for screening the population convenient sampling will be
chosen. Subjects will be randomly allocated to the
Experimental and Control Group by using Chit and Draw
method Simple Randomization. Group A will be
experimental group and group b will be control group.

Blinding (investigator's opinion)

Double blinded

Blinding description

In our research, the participants and outcome assessors
are blinded. As we wanted to make sure that no
biasness at any level.

Health conditions studied

1

Description of health condition studied

Static and dynamic balance training on deaf population

ICD-10 code

H91.93

ICD-10 code description

Unspecified hearing loss, bilateral

Primary outcomes

1

Description

Balance

Timepoint

before intervention and 4 weeks after intervention

Method of measurement

Berg Balance scale

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: interventional group will follow
balance training exercises for 4 weeks in which
5sets/20 reps/All exercises to be held for 30 sec before
returning to starting position that includes
Static exercise:1. Stand on toes, feet apart.2. Stand on to
es, feet together. 3. Stand on right foot unsupported, wit
h left foot behind right knee. 4. Stand on left foot unapp
orted,
with right foot behind left knee. 5. Stand with right heel t
ouching left toe, feet in a straight line
Dynamic exercise:1. Active warm up 2. Trunk twists
3. Walking lunges
