Comparison of core stability and suspension exercise on some EMG coordinates, beta-endorphin and functional disability in people with lumbar disc herniation

Protocol summary

Study aim

Comparison of core stability and suspension exercise on some EMG coordinates, beta-endorphin and functional disability in people with lumbar disc herniation

Design

A clinical trial on 45 people with two intervention groups and one control group (15 people in each group), with parallel groups, randomized

Settings and conduct

The present study is a randomized controlled trial on people with lumbar disc herniation in rasht city. Subjects will participated in a training course for 8 weeks. Measurement of pain, functional disability, range of motion, electromyographic data and blood samples will be performed before and after intervention .

Participants/Inclusion and exclusion criteria

1-Male participants with Age 25-55 years old 2-Mild to moderate lumbar pain intensity with visual analog scale 2 to 7 and severity of disc herniation with grade 1 and 2 (bulging and protrusion) 3-History of low back pain for more than 3 months 4-Not having neurological diseases, cancer, diabetes and any disease affecting on treatment process 5-Not participating in regular sports exercises 6- Not using other treatments for low back pain

Intervention groups

First Intervention group : Core stability exercises for 8 weeks. them as: bridging, push-up, inverted row, oblique sit-up, femur abduction, femur flexion and plank. Second Intervention group: Suspension exercises for 8 weeks which are similar to the first group in suspension model. Control group: Self-care methods at home

Main outcome variables

Plasma beta-endorphin, functional disability, muscle activity

Scientific title

Comparison of core stability and suspension exercise on some EMG coordinates, beta-endorphin and functional disability in people with lumbar disc herniation

Public title

Comparison of core stability and suspension exercise in people with lumbar disc herniation

Purpose

Education/Guidance

Inclusion/Exclusion criteria

Inclusion criteria:

Mild to moderate lumbar pain intensity with a visual analog scale score between 2-7 and severity of disc herniation with grade 1 and 2 (bulging and protrusion) History of low back pain for more than three months Not having specific diseases such as neurological diseases, cancer, diabetes, osteoporosis, etc. Not participating in regular exercise means 3 sessions per week for at least one year Not using other treatments for low back pain during the intervention

Exclusion criteria:

Absences in training More than two session Dissatisfaction with continuing training Getting illness or injury during the intervention period

Age

From **25 years** old to **55 years** old

Gender

Male

Phase

Sample size

Target sample size: **45**

Randomization (investigator's opinion)

Randomized

Randomization description

Restricted randomization, Individual, random allocation roll, Sequentially numbered, sealed, opaque envelopes (The names are written on a piece of paper and placed in similar envelopes. Then they are randomly placed in containers 1, 2 and 3 as a mark of 3 groups)

Blinding (investigator's opinion)

Not blinded

Health conditions studied

1

Description of health condition studied

Lumbar disc herniation

ICD-10 code

M51.26

ICD-10 code description

Other intervertebral disc displacement, lumbar region

Primary outcomes

1

Description

Plasma beta endorphin

Timepoint

12 hours before and after intervention

Method of measurement

Blood sample- ELISA (Enzyme-linked immunosorbent)

2

Description

Functional disability

Timepoint

Before and after intervention

Method of measurement

Oswestry disability index

3

Description

Muscles activity

Timepoint

Before and after intervention

Method of measurement

Electromyography

Secondary outcomes

1

Description

Pain

Timepoint

Before and after intervention

Method of measurement

Mcgill pain questionnaire

2

Description

Lumbar range of motion

Timepoint

Before and after intervention

Method of measurement

Modified Schöber test

Intervention groups

1

Description

First Intervention group : core stability exercises for 8 weeks, 3 sessions per week including warm-up (5 minute), exercise (40 minute) and cool down (5 minute). Exercises include bridging (5 repetitions in form of movement-hold-back with 2-3-2 seconds and 1 minute rest between repetitions), push-up (Similar to the first case), inverted row (Similar to the first case), oblique sit-up (Similar to the first case), femur abduction (Similar to the first case), femur flexion (Similar to the first case) and plank (1 repetition with 10 seconds hold). There are 1 minute rest between each workout and the next

Category

Rehabilitation

2

Description

Second Intervention group: Suspension exercises for 8 weeks, 3 sessions per week including warm-up (5 minute), exercise (40 minute) and cool down (5 minute). Exercises include suspension bridging (5 repetitions in form of movement-hold-back with 2-3-2 seconds and 1 minute rest between repetitions), suspension push-up (Similar to the first case), suspension inverted row (Similar to the first case), suspension oblique sit-up (Similar to the first case), suspension femur abduction (Similar to the first case), suspension femur flexion (Similar to the first case) and suspension plank (1 repetition with 10 seconds hold). There are 1 minute rest between each workout and the next

Category

Rehabilitation

3

Description

Control group: Self-care methods at home (Such as how to properly sit, sleep and carry and lift loads)

Category

Behavior

Title and more details about the data/document

Part of the data, such as primary and secondary outcome information is shared

When the data will become available and for how long

Access starts 12 months after the results are published

To whom data/document is available

Researchers from academic institutions and medical therapists

Under which criteria data/document could be used

There are no other conditions

From where data/document is obtainable

Send request to email yaser.mr2003@gmail.com

What processes are involved for a request to access data/document

First, the official request should be sent to the e-mail and after confirmation, other documents such as ID card and university confirmation documents should be sent. Data

documents will be sent in less than a month after

verification
