

Clinical Trial Protocol

Iranian Registry of Clinical Trials

26 May 2026

Comparison of fat injection with and without stromal vascular fraction in the treatment of nasolabial and cheek wrinkles

Protocol summary

Study aim

Comparison of fat injection and fat with stromal vascular fraction injection in the treatment of nasolabial and cheek wrinkles

Design

Clinical trial with control group, with factorial design, one side blinded, randomized, phase 3 on 20 patients. Even and odd numbers used for randomization.

Settings and conduct

20 patients referred to the outpatient clinic of Sinai hospital with medium to deep nasolabial and cheek wrinkles will be randomly selected and randomly divided into two groups of 15 patients. One group will be with fat injections and the other group will be injected with svf and fat injections obtained from the patient. After the injection, the patient will be monitored for 3, 6 and 12 months for the severity of wrinkles, complications (any reaction at the injection site, erythema, bruising, papules, nodules, etc.) and the stability of the effects of the injection. .

Participants/Inclusion and exclusion criteria

Age older than 65 years old; patient satisfaction, and moderate to deep nasolabial wrinkles. Exclusion criteria: diabetes; allergy to svf; hematologic and coagulation problems; smoking; pregnancy; aspirin use; and immune system defects.

Intervention groups

Patients receive 5 ml of pure fat and 5 ml of svf using needle number 27 within 7 minutes. Control group: patients receive 5 ml of pure fat using needle number 27 within 7 minutes.

Main outcome variables

The severity of nasolabial and cheek wrinkles

Scientific title

Comparison of fat injection with and without stromal vascular fraction in the treatment of nasolabial and cheek wrinkles

Public title

Effect of fat injection with and without SVF in the treatment of facial wrinkles

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Age under 65 years old Patients satisfaction Middle to deep nasolabial wrinkles

Exclusion criteria:

Diabetes melitus Patients with hematologic and coagulation problems Smoking Pregnancy Use of Aspirin Patients with defective immune system

Age

To 65 years old

Gender

Both

Phase

3

Groups that have been masked

- Participant

Sample size

Target sample size: 20

Actual sample size reached: 20

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization will be done using the patient file number and using even and odd numbers. The criterion will be the last digit of the patient's file number and the number zero will be considered even. Evens will be considered as a study group and odd numbers as a control group.

Blinding (investigator's opinion)

Single blinded

Blinding description

Patients will be blinded for the type of solution injected.

Placebo
