Evaluation the analgesic effect of Pergabalin on postoperative pain : A double blind randomized clinical trial

Protocol summary

Study aim

Determining the effect of pregabalin on pain after inguinal hernia repair surgery by open method:

Design

There were 30 patients in the control group who were separated from the control group by dropping a coin. They received 75 mg of pregabalin 1 hour before the operation and 12 hours after it, and the control group was given a placebo at same time. Patient pain was measured at 0, 6, 12, 24 and 48 hours after surgery

Settings and conduct

The experiment was performed in Shahid Beheshti Hospital of Kashan. The people who gave medicine and placebo to the patients and the patients and the analyzer became blind were 30 people in the control group who received 75 mg of pregabalin 1 hour before the operation and 12 hours after it and the control group. At the same time, a placebo was given and then the patient's pain was measured at 6, 12, 24 and 48 hours after surgery.

Participants/Inclusion and exclusion criteria

Inclusion criteria: open inguinal hernia repair surgery. Having an age between 20 to 65 years. Exclusion criteria: Pregnancy, history of pregabalin allergy, history of pregabalin treatment, history of syndrome Chronic pain and analgesia, alcohol and drug addiction, pethidine allergy,

Intervention groups

There were 30 patients in the control group who received 75 mg of pregabalin 1 hour before and 12 hours after the operation and the control group was given a placebo at the same time.

Main outcome variables

Age; sex; dosage of pethidine use; nausea and vomiting; pain score

Scientific title

Evaluation the analgesic effect of Pergabalin on postoperative pain : A double blind randomized clinical trial

Public title

The analgesic effect of Pergabalin on post operative pain

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

patients candidate for open inguinal herniorraphy patients between 20 to 65 years old

Exclusion criteria:

pregnancy sensitivity to pergabalin addiction to drugs or alcohol sensitivity to pethedin uncontrolled blood pressure

Age

From **20 years** old to **65 years** old

Gender

Both

Phase

3

Groups that have been masked

- Participant
- Data analyser

Sample size

Target sample size: **60**

Actual sample size reached: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

We used Excel , (Random between) , to divide 60 numbers in two groups and then used that order for patients to divide them in two different categories

Blinding (investigator's opinion)

Double blinded

Blinding description

patients were told there is an additional medication to evaluate how pain reponse to it the anilizers didnt know the group of patients

Placebo

Used

Assignment

Health conditions studied**1****Description of health condition studied**

patients candidate for open inguinal herniorraphy

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

the amount of pain after inguinal herniorraphy

Timepoint

mearement of patients painimmediately after herniorraphy and 6,12,24,48 h after surgery

Method of measurement

Comparing the amount of pethedin recieved - Comparing pain rates by V.A.S (Visual Analog Scale)

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: Pregabalin capsules (75 mg)c from Sami Saz Company were given to patients one hour before and 12 hours after surgery.

Category

Treatment - Drugs

2**Description**

Control group: we gave placebos one hour before and 12 hours after surgery to this group

Category

Placebo
