

# Clinical Trial Protocol

## Iranian Registry of Clinical Trials

17 Jun 2026

### The effect of an educational program and tele-nursing on the adherence to treatment regimen in dialysis patients referred to Taleghani Hospital in urmia

#### Protocol summary

##### Study aim

Determining the effect of educational program and telephone follow-up by nurses on adherence to treatment regimen in dialysis patients

##### Design

Random generation sequence was used for randomization in 66 hemodialysis patients with control and intervention group, uncorrected, randomized, phase not applicable.

##### Settings and conduct

This clinical trial study was performed on 66 dialysis patients with end-stage renal disease in the dialysis ward of Taleghani Hospital in Urmia. The data collection tool was a questionnaire and its validity was measured in terms of content and reliability by retest method. Data were collected in four shifts (before the start of the study, immediately after the intervention, one month after the intervention and three months after the intervention). Then the prepared educational set was given to both groups. The intervention group was followed up by telephone conversation (twice a week for twenty minutes) and telephone message (one short message per day) for three months.

##### Participants/Inclusion and exclusion criteria

Inclusion criteria include: Willingness to participate in the study, having no reading and writing problems, having acceptable level of consciousness, not having visual or hearing impairment Exclusion criteria include: Willingness to participate in the study

##### Intervention groups

Intervention group: Telephone intervention in the intervention group will be done for three months. Thus, for follow-up and training by the researcher, telephone calls will be established with the research units twice a week. The content of the telephone conversations will include a training program in the field of diet, medications and fluids, Control group: No follow-up or

intervention was performed for the control group.

##### Main outcome variables

Adhere to diet

**Scientific title**

The effect of an educational program and tele-nursing on the adherence to treatment regimen in dialysis patients referred to Taleghani Hospital in urmia

**Public title**

The effect of an educational program and tele-nursing on the adherence to treatment regimen in dialysis patients: A randomized controlled trial

**Purpose**

Health service research

**Inclusion/Exclusion criteria****Inclusion criteria:**

willing to participate in the study Ability to read No vision problems No cognitive impairment Having a cell phone having a medical file in hemodialysis ward having three hemodialysis sessions per week (3-4hrs each) age between 18 to 65 years.

**Exclusion criteria:**

Not willing to participate in the study

**Age**

From **18 years** old to **65 years** old

**Gender**

Both

**Phase**

N/A

**Groups that have been masked**

- Data analyser

**Sample size**

Target sample size: **66**

Actual sample size reached: **80**

**Randomization (investigator's opinion)**

Randomized

**Randomization description**

Randomize using Random generation sequence The English letters A and B were typed on 66 cards (33 each) and then placed in an envelope. Patients who met the inclusion criteria took a T-card from the envelope and were placed in the intervention group if card A was selected and in control group if card B was selected.

**Blinding (investigator's opinion)**

Single blinded

**Blinding description**

This study was Single-blinded and the researcher analyzing the statistical data will be unaware of the control and intervention groups.

**Placebo**

Not used

**Assignment**

Parallel

**Other design features**

Unlike other studies conducted in one educational intervention group, this study provided an educational file for both groups and only guided the intervention group through telephone follow-up.

**Secondary Ids**

empty

**Health conditions studied****1****Description of health condition studied**

Chronic renal failure

**ICD-10 code**

I13.11

**ICD-10 code description**

Hypertensive heart and chronic kidney disease without heart failure, with stage 5 chronic kidney disease, or end stage renal disease

**Primary outcomes****1****Description**

Adherence to the diet of hemodialysis patients

**Timepoint**

The effect of telephone follow-up (tele-nursing) on the diet of hemodialysis patients

**Method of measurement**

The effect of telephone follow-up (tele-nursing) on the diet of hemodialysis patients How to measure treatment adherence questionnaire in patients with chronic renal failure

**Secondary outcomes**

empty

**Intervention groups**

## 1

### Description

Intervention group: Intervention group: Telephone intervention in the intervention group will be done for three months. Thus, for follow-up and training by the researcher, telephone calls will be established with the research units twice a week. The time of making a telephone call is determined by asking the opinion of the research units. The average duration of each conversation is 20 minutes. The content of telephone conversations will include a training program in the field of diet, medications and fluids, and if a problem is found, a suggested solution will be offered to solve the problem and answer the patient's questions.
