A study to compare the relative bioavailability of SanaMed and gsk formulations of lansoprazole 30 mg capsules in 24 healthy adult volunteers under fasting conditions

Protocol summary

Study aim

The study aims to evaluate the bioequivalence of Lansoprazole 30 mg capsules produced by two different pharmaceutical companies under fasting conditions

Design

This randomized, single-dose, two-way, crossover study is conducted to compare the pharmacokinetic of lansoprazole and Prevacid® capsules in 24 healthy adults volunteers. Volunteers will be sorted and receive a number from 1 to 24. In the first phase of the study, 12 volunteers will receive lansoprazole manufactured by SanaMed and the remaining 12 volunteers will receive Prevacid® produced by gsk company. The administered drugs will be replaced by each other in the second phase of the study.

Settings and conduct

The dose administration and subsequent sample collection will be performed in S. Motahhari hospital (Gonbade Kavous, Iran).

Participants/Inclusion and exclusion criteria

Inclusion criteria: 18-50 years of age. The subject is available for the entire study period and is willing to adhere to protocol requirements as evidenced by written informed consent. Good health at screening. Exclusion criteria: History of any drug hypersensitivity or intolerance. Significant history or current evidence of chronic disease. Receipt of any drug as part of a research study within 30 days prior to the present study.

Intervention groups

First intervention group: A single 30 mg oral dose of lansoprazole (1 capsule) manufactured by SanaMed company to 12 subjects. Second intervention group: A single 30 mg oral dose of Prevacid (1 capsule) manufactured by gsk company to 12 subjects. Since in this study, the volunteers will receive both Test and Reference drugs, each volunteer will act as his own control.

Main outcome variables

Drug plasma concentration; Area under the plasma concentration-time curve

Scientific title
A study to compare the relative bioavailability of SanaMed and gsk formulations of lansoprazole 30 mg capsules in 24 healthy adult volunteers under fasting conditions

Public title
Bioequivalence study of lansoprazole 30 mg capsules

Purpose
Basic science

Inclusion/Exclusion criteria
Inclusion criteria:
18-50 years of age. The subject is able and willing to provide signed informed consent. The subject is available for the entire study period and is willing to adhere to protocol requirements as evidenced by written informed consent. The subject has stable residence and telephone. Good health as determined by lack of clinically significant abnormalities in health assessments performed at screening.

Exclusion criteria:
History of allergy or sensitivity to lansoprazole. History of any drug hypersensitivity or intolerance which, in the opinion of the investigator, would compromise the safety of the subject of the study. Significant history or current evidence of chronic infectious disease, system disorder or organ dysfunction. Presence of gastrointestinal disease or history of malabsorption within the last year. History of a medical disorders occurring within the last year that required hospitalization or medication. Use of pharmacologic agents known to significantly induce or inhibit drug-metabolizing enzymes within 30 days prior to dosing. Receipt of any drug as part of a research study within 30 days prior to the present study. Donation or significant loss of whole blood (480 ml or more) within 30 days prior to the present study.

Age
From **18 years** old to **50 years** old

Gender
Both

Phase
Bioequivalence

Groups that have been masked
No information

Sample size
Target sample size: **24**
More than 1 sample in each individual
Number of samples in each individual: **14**
A volume of 2 ml of blood is obtained in each sampling time through a venous cannula

Randomization (investigator's opinion)
Randomized

Randomization description
Each subject is identified by a number from 1 to 24. This number is allocated according to their entrance to volunteers' list in the screening day. According to the

crossover design of the study, the twenty four participants randomized into two sequences of Test/Reference and Reference/Test products using command of rand in the Excel program.

Blinding (investigator's opinion)
Not blinded

Blinding description

Placebo
Not used

Assignment
Crossover

Health conditions studied

1

Description of health condition studied

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Drug plasma concentration

Timepoint

At time zero and 0, 0.5, 0.75, 1, 1.25, 1.5, 2, 2.5, 3, 4, 5, 6, 8 and 10 h after drug administration

Method of measurement

Blood sampling and measurement of drug concentrations by High-Performance Liquid Chromatography

2

Description

Area under plasma concentration-time curve

Timepoint

At time zero and 0, 0.5, 0.75, 1, 1.25, 1.5, 2, 2.5, 3, 4, 5, 6, 8 and 10 h after drug administration

Method of measurement

Blood sampling and measurement of drug concentrations by High-Performance Liquid Chromatography

Secondary outcomes

1

Description

Plasma half-life

Timepoint

From the terminal 6 hours of plasma concentration-time profile

Method of measurement

Blood sampling and drug analysis by High-Performance Liquid Chromatography

Intervention groups

1

Description

Intervention group: Oral administration of a single 30 mg dose of lansoprazole (1 capsule) manufactured by Sana Med to healthy volunteers under fasting condition in the morning of the experiment day

Category

Treatment - Drugs

2

Description

Intervention group: Oral administration of a single 30 mg dose of Prevacid (1 capsule) manufactured by gsk to healthy volunteers under fasting condition in the morning of the experiment day

Category

Treatment - Drugs
