

# Clinical Trial Protocol

## Iranian Registry of Clinical Trials

17 Sep 2026

### A study to compare the relative bioavailability of Cosar and Takeda formulations of pantoprazole 40 mg tablets in 24 healthy adult volunteers under fasting conditions

#### Protocol summary

##### Study aim

The study aims to evaluate the bioequivalence of pantoprazole 40 mg tablets produced by two different pharmaceutical companies under fasting conditions

##### Design

This randomized, single-dose, two-way, crossover study is conducted to compare the pharmacokinetic of pantoprazole and Pantozol® tablets in 24 healthy adults volunteers. Volunteers will be sorted and receive a number from 1 to 24. In the first phase of the study, 12 volunteers will receive pantoprazole manufactured by Cosar and the remaining 12 volunteers will receive Pantozol® produced by Takeda company. The administered drugs will be replaced by each other in the second phase of the study.

##### Settings and conduct

The dose administration and subsequent sample collection will be performed in S. Motahhari hospital (Gonbade Kavous, Iran).

##### Participants/Inclusion and exclusion criteria

Inclusion criteria: 18-50 years of age. The subject is available for the entire study period and is willing to adhere to protocol requirements as evidenced by written informed consent. Good health at screening. Exclusion criteria: History of any drug hypersensitivity or intolerance. Significant history or current evidence of chronic disease. Receipt of any drug as part of a research study within 30 days prior to the present study

##### Intervention groups

First intervention group: A single 40 mg oral dose of pantoprazole (1 tablet) manufactured by Cosar company to 12 subjects. Second intervention group: A single 40 mg oral dose of Pantozol (1 tablet) manufactured by Takeda company to 12 subjects. Since in this study, the volunteers will receive both Test and Reference drugs, each volunteer will act as his own control.

##### Main outcome variables

Drug plasma concentration; Area under the plasma concentration-time curve

**Scientific title**

A study to compare the relative bioavailability of Cosar and Takeda formulations of pantoprazole 40 mg tablets in 24 healthy adult volunteers under fasting conditions

**Public title**

Bioequivalence study of pantoprazole 40 mg tablets

**Purpose**

Basic science

**Inclusion/Exclusion criteria****Inclusion criteria:**

18-50 years of age. The subject is able and willing to provide signed informed consent. The subject is available for the entire study period and is willing to adhere to protocol requirements as evidenced by written informed consent. The subject has stable residence and telephone. Good health as determined by lack of clinically significant abnormalities in health assessments performed at screening.

**Exclusion criteria:**

History of allergy or sensitivity to esomeprazole magnesium. History of any drug hypersensitivity or intolerance which, in the opinion of the investigator, would compromise the safety of the subject of the study. Significant history or current evidence of chronic infectious disease, system disorder or organ dysfunction. Presence of gastrointestinal disease or history of malabsorption within the last year. History of a medical disorders occurring within the last year that required hospitalization or medication. Use of pharmacologic agents known to significantly induce or inhibit drug-metabolizing enzymes within 30 days prior to dosing. Receipt of any drug as part of a research study within 30 days prior to the present study. Donation or significant loss of whole blood (480 ml or more) within 30 days prior to the present study.

**Age**

From **18 years** old to **50 years** old

**Gender**

Both

**Phase**

Bioequivalence

**Groups that have been masked**

No information

**Sample size**

Target sample size: **24**

More than 1 sample in each individual

Number of samples in each individual: **13**

A volume of 2 ml of blood is obtained in each sampling time through a venous cannula

**Randomization (investigator's opinion)**

Randomized

**Randomization description**

Each subject is identified by a number from 1 to 24. This number is allocated according to their entrance to volunteers' list in the screening day. According to the crossover design of the study, the twenty four

participants randomized into two sequences of Test/Reference and Reference/Test products using command of rand in the Excel program.

**Blinding (investigator's opinion)**

Not blinded

**Health conditions studied****1****Description of health condition studied****ICD-10 code****ICD-10 code description****Primary outcomes****1****Description**

Drug plasma concentration

**Timepoint**

At time zero and 0.5, 1, 1.5, 2, 2.5, 3, 3.5, 4, 5, 6, 8, 10 and 12 h after drug administration

**Method of measurement**

Blood sampling and measurement of drug concentrations by high-performance liquid chromatography

**2****Description**

Area under plasma concentration-time curve

#### **Timepoint**

At time zero and 0.5, 1, 1.5, 2, 2.5, 3, 3.5, 4, 5, 6, 8, 10 and 12 h after drug administration

#### **Method of measurement**

Blood sampling and measurement of drug concentrations by high-performance liquid chromatography

## **Secondary outcomes**

### **1**

#### **Description**

Plasma half-life

#### **Timepoint**

From the terminal 6 hours of plasma concentration-time profile

#### **Method of measurement**

Blood sampling and drug analysis by high-performance liquid chromatography

## **Intervention groups**

### **1**

#### **Description**

Intervention group: Oral administration of a single 40 mg dose of pantoprazole (1 tablet) manufactured by Cosar to healthy volunteers under fasting condition in the morning of the experiment day

#### **Category**

Treatment - Drugs

### **2**

#### **Description**

Intervention group: Oral administration of a single 40 mg dose of Pantozol (1 tablet) manufactured by Takeda to healthy volunteers under fasting condition in the morning of the experiment day

#### **Category**

Treatment - Drugs
