Sample size
Target sample size: **75**
Randomization (investigator's opinion)
Randomized
Randomization description
Participants who completed the pre-test questionnaires randomly using the website www.random.org and through block classification based on work shift (fixed shift or rotating shift) with blocks Six or nine and a 1: 1: 1 allocation ratio to three groups (one group receiving stress management counseling, one group receiving marital relationship enrichment counseling, and one control group). Blocking will be done by a person not involved in sampling and data analysis. To hide the allocation, the type of intervention will be written on paper and placed inside the numbered envelopes, numbered consecutively (Allocation Concealment). The envelopes will be opened in the order in which the participants enter the study and the type of intervention received by them will be determined. In order to prevent contamination, one person will be selected from each section, so that the first person who is eligible and willing to participate in the study will be selected from each section.

Health conditions studied

1

Description of health condition studied
Job stress, sexual satisfaction, marital satisfaction
ICD-10 code
ICD-10 code description

Primary outcomes

1

Description
Comparison of the mean score of sexual satisfaction, 2 weeks after the intervention in the control and intervention groups (2 groups receiving counseling) with controlling the effect of baseline score

Timepoint
Before the intervention and 2 weeks after the intervention in the control and intervention groups (2 groups receiving counseling) by controlling the effect of baseline score

Method of measurement
Larson Sexual Satisfaction Questionnaire

2

Description
Comparison of the mean score of marital satisfaction, 2 weeks after the intervention in the control and intervention groups (2 groups receiving counseling) controlling the effect of the base score

Timepoint
Before the intervention and 2 weeks after the intervention in the control and intervention groups (2 groups receiving counseling) controlling the effect of baseline score

Method of measurement
Enrich Marital Satisfaction Questionnaire

Secondary outcomes

1

Description
Comparison of mean job stress score 2 weeks after the intervention in control and intervention groups (2 groups receiving counseling) with controlling the effect of baseline score

Timepoint
Before the intervention and 2 weeks after the intervention in the control and intervention groups (2 groups receiving counseling) by controlling the effect of baseline score

Method of measurement
OSIPO Job Stress Questionnaire

Intervention groups

1

Description
