Investigation of the effect of Self-Management Programs on Hope and Anxiety in Heart failure patients

Protocol summary

Study aim

Determining the effect of a self-management program on the level of hope and anxiety in patients with heart failure

Design

A clinical trial with a control group, with parallel groups, Unblinded, non-randomized, on 100 patients

Settings and conduct

Location: Selected hospitals by Shahid Beheshti University of Medical Sciences, Tehran. Patients will be randomly divided into intervention and control groups. In the intervention group, patients are provided with a self-management program along with standard Procedure, and in the control group, Solely the standard procedure is performed. After the intervention, the level of anxiety and hope will be measured using the Questionnaire and then the information will be compared using SPSS software version 26. The Researchers and Participants are Unblinded.

Participants/Inclusion and exclusion criteria

Entry Requirements: People between the ages of 18-80 years. Have the ability to use virtual messengers. Not having previous training in a self-management program. Suffering from Class 2 and 3 heart failure according to the file Non-Entry Conditions: Aggravation of the disease and transfer of the patient to the intensive care unit Reluctance to continue participating in the research

Intervention groups

In the experimental group, the self-management program was provided to the patients along with the usual care, and in the control group, the usual care was implemented.

Main outcome variables

Anxiety; Hope

Target sample size: **100**

Actual sample size reached: **100**

Randomization (investigator's opinion)

Randomized

Randomization description

The Random allocation of the two groups under study is done by block random allocation with SPSS software. The Blocks are designed in quadruplets that are all randomly determined by SPSS Randomization Tool: SPSS Software. How to build a random sequence: SPSS Software. Explanation about the concealment: the allocated blocks are placed in the envelopes of the letter. After each person refers, an envelope is given to the researcher, then the envelope is opened and the person who refers is placed in one of the two groups. It should be noted that The researcher does not know the content inside the envelopes.

Blinding (investigator's opinion)

Not blinded

Intervention groups

1

Description

Intervention group: In the experimental group, patients are provided with a self-management program along with routine care. The self-management program will be implemented by creating a group in WhatsApp or Telegram cyberspace in six sessions, which includes a self-management program, and patients are constantly monitored and followed up individually by phone call and up to Uncertainty does not end with a full understanding

of the training program, and if any problems occur in the process of conveying the concepts of the program, a face-to-face class will be formed.

Category

N/A

2

Description

Control group: The control group also receives routine care.
