The effect of distance of needle on the Dialysis Adequacy in hemodialysis patients in Razi Educational and Medical Hospital in Rasht.

Protocol summary

Study aim

The effect of direction and distance of needle on the Dialysis Adequacy in hemodialysis patients in Razi Educational and Medical Hospital in Rasht.

Design

A controlled clinical trial, with parallel groups, without blinding, randomized, on 60 patients undergoing hemodialysis. To randomize from Sealed Envelope Ltd. online randomization service 2019 was used.

Settings and conduct

This study will be performed on hemodialysis patients at Razi Hospital in Rasht in 2021. The Dagdras formula will also be used to measure dialysis adequacy. To measure BUN before and after dialysis, a blood sample will be taken from the arterial route immediately before the start of hemodialysis and at the last minute.

Participants/Inclusion and exclusion criteria

Hemodialysis patients with a minimum age of 18 years, patients with the end-stage renal disease with hemodialysis at least three times a week for four hours per session, a history of at least three months of dialysis, having a venous arterial fistula, completing the duration of dialysis in all sessions, Blood flow rate of at least 250 ml/min and dialysis flow rate of 500 ml/min will be entered. Exclusion criteria will include the need for cardiopulmonary resuscitation, incomplete dialysis sessions, and the patient's lack of cooperation for any reason.

Intervention groups

In this study, the control group will be the last dialysis session of each patient before the intervention. Eligible patients were randomly divided into two groups with random blocking, the experimental group with a distance of 3 cm and in the opposite direction, the experimental group with a distance of 6 cm and in the opposite direction.

Main outcome variables

Measurable outcome includes dialysis adequacy in hemodialysis patients.

Scientific title

The effect of distance of needle on the Dialysis Adequacy in hemodialysis patients in Razi Educational and Medical Hospital in Rasht.	
Public title	The effect of distance of needle on the Dialysis Adequacy
Purpose	Treatment
Inclusion/Exclusion criteria	Inclusion criteria: Patients undergoing hemodialysis whose chronological age was above 18 solar years Patients with end-stage renal disease who underwent hemodialysis at least three times a week for four hours per session History of at least three months of dialysis Having a venous arterial fistula Complete the duration of dialysis in all sessions The blood flow rate of at least 250 ml per minute The dialysis flow rate of 500 ml per minute Exclusion criteria: Need for cardiopulmonary resuscitation Incomplete dialysis sessions Patient non-cooperation for any reason
Age	From 18 years old
Gender	Both
Phase	N/A
Groups that have been masked	No information
Sample size	Target sample size: 60 More than 1 sample in each individual Number of samples in each individual: 3 The adequacy of dialysis will be measured in three consecutive sessions by changing the direction and distance of arteriovenous needles by Kt/V based method.
Randomization (investigator's opinion)	Randomized
Randomization description	The initial sampling method is convenience sampling and the main sampling of the present study will be block randomization. Patients who met the inclusion criteria were randomly divided into two groups of block randomization with the size of 4 and 6 blocks, the experimental group with a distance of 3 cm and in the opposite direction, the experimental group with a distance of 6 cm and in the opposite direction. To generate a randomization list from the online randomization service Sealed Envelope Ltd 2019 was used.
Blinding (investigator's opinion)	Not blinded
Blinding description	
Placebo	Not used
Assignment	Parallel
Other design features	
Secondary Ids	empty

Title and more details about the data/document

Only part of the data, such as information about the main outcome or the like, can be shared.

When the data will become available and for how long

Access period starts 6 months after the results are published

To whom data/document is available

It will be available only to researchers working in academic and scientific institutions

Under which criteria data/document could be used

Researchers in the field of hemodialysis on request

From where data/document is obtainable

Communicate with the authors of the present study via email

What processes are involved for a request to access data/document

Communicate with the authors of the present study via email
