The effect of misoprostol on removal endometrial polyp

Protocol summary

Study aim

The effect of misoprostol on removal endometrial polyp

Design

A non-randomized control trial, without control group,
Phase 2, 30 patients

Settings and conduct

30 infertile women will be diagnosed with the primary endometrial polyp using vaginal sonography with color doppler. Saline infusion sonography will be performed for the confirmation of the diagnosis. After that patients will receive misoprostol. A repeated vaginal sonography with color doppler will perform 8 hours later. Hysteroscopy will perform for all patients to evaluate the treatment effect of misoprostol.

Participants/Inclusion and exclusion criteria

Infertile women with endometrial polyp

Intervention groups

Misoprostol administration for women with endometrial polyp

Main outcome variables

Endometrial polyp removal

Scientific title

The effect of misoprostol on removal endometrial polyp

Public title

Misoprostol and endometrial polyp

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Endometrial polyp in normal saline sonography Infertility
45>=Age>=18

Exclusion criteria:

Uterus malformation Sensitivity to prostaglandin analogs

Age

From **18 years** old to **45 years** old

Gender

Female

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 30

Randomization (investigator's opinion)

Health conditions studied**1****Description of health condition studied**

Endometrial polyp

ICD-10 code

N97.2

ICD-10 code description

Female infertility of uterine origin

Primary outcomes**1****Description**

Endometrial polyp removal

Timepoint

8 hours after misoprostol administration

Method of measurement

Vaginal sonography, hysteroscopy

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: Each patient receive two tablets of 200 microgram misoprostol (cytotec) in the manner 200 microgram vaginal and 200 microgram oral at the same time. After eight hours each patient evaluate by transvaginal sonography with color doppler in terms of removal endometrial polyp.
