Randomization (investigator's opinion)

Randomized

Randomization description

In this research, systematic randomization is applied. Pregnant women who are referred to prenatal clinic are asked to enroll if they are interested in .For determining the counting distance , the number of enrolled women is divided to intended cases of the research .For choosing the first case, a number from 1 to 10 is selected randomly. This number is allocated to the first case. other cases are selected based on the counting distance till 100 cases are selected. A number is selected from 1 to 100. If this number is even, all the even numbers will be selected as intervention group and odd numbers will be selected as control group.
