Evaluation of the effect of Preoperative administration of Dexmedetomidine on pain, nausea & vomiting after orthognathic surgery

Protocol summary

Study aim

evaluating the effect of Dexmedetomidine intravenous administration on pain degree, nausea, and vomiting in patients after bimaxillary orthognathic surgery.

Design

A randomized triple-blind clinical trial with a control group. The study design includes two parallel groups in the 3rd phase each including 30 patients. According to the table of random numbers, patients are classified into two groups. In group A, the drug, and in group B, the placebo will be prescribed

Settings and conduct

Oral and maxillofacial surgery department of Qaem hospital, Mashhad. The patients, the outcome assessor and data analyzer would not be aware of the drugs administered in each group.

Participants/Inclusion and exclusion criteria

The inclusion criteria: 1. Patients with skeletal class 3 deformity, aged from 18 to 40 years who are candidates for bimaxillary orthodontic surgery (maxillary advancement using Lefort 1 osteotomy and mandibular setback surgery by bilateral sagittal split osteotomy (BSSO)) 2. Body Mass Index less than 30 kg / m² 3. Complete the informed consent The Exclusion criteria: 1. Patients with a history of drug allergy, Motion Sickness, addiction or psychological problems and hypotension and bradycardia 2. Patients with upper gastrointestinal problems such as gastric ulcer, reflux, pyloric stenosis

Intervention groups

In the intervention group, dexmedetomidine is administered intravenously with an induction dose of 1 µg / kg and a maintenance dose of 0.2 µg/kg.h, twenty minutes before the start of orthognathic surgery anesthesia. In the control group, a placebo (Normal Saline 0/9%) is administered similarly to the intervention group.

Main outcome variables

The degree of pain will be assessed using the Visual Numerical Scale (VAS), the presence or absence of

nausea and vomiting will be evaluated immediately and 1 hour, 3 hours, 6 hours, 12 hours, and the 24 hours postoperatively

Scientific title
Evaluation of the effect of Preoperative administration of Dexmedetomidine on pain, nausea & vomiting after orthognathic surgery

Public title
The effect of dexmedetomidine on pain, nausea and vomiting following orthognathic surgery

Purpose
Supportive

Inclusion/Exclusion criteria
Inclusion criteria:
Patients between the ages of 18 and 40 Patients with skeletal class 3 deformity who are candidates for bimaxillary orthodontic surgery (maxillary advancement using Lefort 1 osteotomy and mandibular setback surgery by bilateral sagittal split osteotomy (BSSO)) Patients with a Body Mass Index of less than 30 kg / m2 Patients who have completed the informed consent
Exclusion criteria:
Patients with a history of drug allergy Patients with a history of Motion Sickness Patients with a history of addiction or psychological problems Patients with a history of hypotension and bradycardia Patients with upper gastrointestinal problems such as gastric ulcer, reflux, pyloric stenosis

Age
From **18 years** old to **40 years** old

Gender
Both

Phase
3

Groups that have been masked

- Participant
- Investigator
- Outcome assessor
- Data analyser

Sample size
Target sample size: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
Since the two groups are supposed to have the same sample size, Patients eligible for inclusion will be divided into 2 groups using the Blocked Randomization method by one of the nurses of the relevant ward, who is not aware of the implementation of the study. Random sequences will be generated using the Random Generator program. Based on the random block method, 15 blocks of four-block will be generated for 60 patients. Random allocation concealment will be done using sequentially numbered, sealed, opaque envelopes by an independent person who does not know the study process.

Blinding (investigator's opinion)

Triple blinded

Blinding description
In this study, the patient, surgeon, outcome assessor, and statistical analyzer will not be aware of the study groups. Regarding patients, blinding is so that patients will not know if they will receive a drug or a placebo. Regarding the assessor, the operator who delivers the pain questionnaires to the patient and completing the study checklist is not aware of the group assignment. The statistical analyzer will be blinded and all data will be provided in the form of coding to him. Furthermore, the anesthesiologist was aware of the drug types in order to prevent the peri- and postoperative complications.

Health conditions studied

1

Description of health condition studied

Acute pain

ICD-10 code

G89.1

ICD-10 code description

Acute pain, not elsewhere classified

2

Description of health condition studied

Nausea and vomiting

ICD-10 code

R11

ICD-10 code description

Nausea and vomiting

Primary outcomes

1

Description

Pain degree

Timepoint

1 hour, 3 hours, 6 hours, 12 hours, and 24 hours postoperatively

Method of measurement

Visual analogue scale (VAS) for pain

2

Description

Presence or absence of nausea

Timepoint

Immediately after recovery and 1 hour, 3 hours, 6 hours, 12 hours, and 24 hours postoperatively

Method of measurement

scoring (0=non, 1=nausea)

3

Description

Presence or absence of vomiting

Timepoint

Immediately after recovery and 1 hour, 3 hours, 6 hours, 12 hours, and 24 hours postoperatively

Method of measurement

scoring (0=non, 1=vomiting, 2=vomiting >2 times)

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: In the intervention group, dexmedetomidine vial made by Hospira Co. with the brand name of Precedex, Will be administered intravenously with an induction dose of 1 µg/kg and a maintenance dose of 0.2 µg/kg.h. twenty minutes before the start of orthognathic surgery anesthesia.

Category

Treatment - Drugs

2

Description

Control group: In the control group, Normal Saline 0.9% with the volume equal to a dose of Dexmedetomidine will be administered intravenously, twenty minutes before the start of orthognathic surgery anesthesia.

Category

Placebo

Title and more details about the data/document

All collected data would be shared for all researchers after the participants were unidentified.

When the data will become available and for how long

The access to data will be started 6 months after publication

To whom data/document is available

The data would only be available for people working in academic institutions.

Under which criteria data/document could be used

It is allowed to use the data for meta-analysis and systematic reviews.

From where data/document is obtainable

The data can be obtained via email, from the corresponding researches (Dr Sahand samiee rad). E-mail: samieerads@mums.ac.ir

What processes are involved for a request to access data/document

The new research proposal and the processes details should be e-mailed to corresponding researcher in order
