

Clinical Trial Protocol

Iranian Registry of Clinical Trials

08 Jul 2026

Evaluating the effect of pre-operative administering of oral Tizanidine on the pain amount following orthognathic surgery.

Protocol summary

Study aim

Evaluating the amount of pain after administration of a single dose of 4mg Tizanidine tablet one hour before the bimaxillary orthognathic surgery.

Design

A clinical trial with a control group, with parallel groups, double blinded, randomized, phase 3 on 60 patients. The patient, surgeon, outcome assessor, and statistical analyzer will not be aware of the study groups. Block randomization will be done by the computer software "Random Allocation Software".

Settings and conduct

Setting: Maxillofacial department of Qhaem Hospital, Mashhad. The patients, the surgeon, the outcome assessor, and the data analyzer would not be aware of the administered drugs.

Participants/Inclusion and exclusion criteria

Inclusion criteria : 1-Patients suffering from skeletal class 3 deformity, requiring advancement of the maxilla and set back of mandible . 2-Patients between 18 to 40 years old.3- Patients who completed the informed consent. 4- Patients who are categorized in the 1st and 2nd group according to the ASA 5- BMI index less than 30kg/m The Exclusion criteria 1-Patients with a history of using analgesics or psychiatric medication during the previous month. 2-Patients with a history of addiction or psychological problems.3- Patients with a history of drug allergy. 4-Patients with a history of chronic pain 5- Patients with a history of low blood pressure and bradycardia 6-Patients with a history of using ciprofloxacin and Fluoxetine7- Patients who want to leave the trial by any reason

Intervention groups

Intervention group: A single dose of 4 mg oral Tizanidine tablet will be dissolved in 10cc of apple juice and will be administered 1 hour before the surgery. Control group: Administration of 10cc of natural apple juice in which no drug or substance is dissolved as a placebo one hour before the surgery.

Main outcome variables

The amount of pain using the Visual analog scale.

Scientific title

Evaluating the effect of pre-operative administering of oral Tizanidine on the pain amount following orthognathic surgery.

Public title

Evaluating the effect of Tizanidine on pain following orthognathic surgery.

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

Patients suffering from skeletal class 3 deformity, requiring advancement of the maxilla and set back of mandible using Lefort 1 and BSSO (Bilateral Sagittal Split Osteotomy) technique respectively. Patients between 18 to 40 years old. Patients who completed the informed consent. Patients who are categorized in the 1st and 2nd group according to the ASA (American Society of Anesthesiology) BMI index less than 30kg/m2

Exclusion criteria:

Patients with a history of using analgesics or psychiatric medication during the previous month. Patients with a history of addiction or psychological problems . Patients with a history of drug allergy. Patients with a history of chronic pain Patients with a history of low blood pressure and bradycardia Patients with a history of using ciprofloxacin and Fluoxetine Patients who want to leave the trial by any reason

Age

From **18 years** old to **40 years** old

Phase

3

Groups that have been masked

- Participant
- Care provider
- Outcome assessor
- Data analyser

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

Since the two groups are supposed to have the same sample size, the restricted randomization method and permuted block randomization will be used in this study. Random block units will usually be used to balance the number of samples assigned to each of the groups studied. The size of blocks will be selected randomly and there is an equal number of each group in each block. Creating a random sequence will be performed by computer software " Random Allocation Software". Random allocation concealment will be done using sequentially numbered, sealed, opaque envelopes by an

independent person who does not know the study process.

Blinding (investigator's opinion)

Double blinded

Blinding description

In this study, the patient, surgeon, outcome assessor, and statistical analyzer will not be aware of the study groups. Regarding patients, blinding is so that patients will not know if they will receive a drug or a placebo. Regarding the assessor, the operator who delivers the pain questionnaires to the patient and completing the study checklist is not aware of the group assignment. The statistical analyzer will be blinded and all data will be provided in the form of coding to him. Furthermore, the anesthesiologist was aware of the drug types in order to prevent the peri- and postoperative complications.

Health conditions studied**1****Description of health condition studied**

pain in jaws

ICD-10 code

K10.9

ICD-10 code description

Disease of jaws, unspecified

Primary outcomes

1

Description

Amount of pain in the specified time period.

Timepoint

1 ,3 ,6 , 12 , 18 ,and 24 hours after the surgery.

Method of measurement

Visual Analogue Scale (VAS)

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Intervention group: One dose of 4 mg oral Tizanidine will be dissolved in 10cc of apple juice and will be prescribed to the patients 1 hour before the surgery. Tizanidine will be prescribed in one dose before surgery and the anti pain features will assessed after operation. Tizanidine is and alpha2 agonist from clonidine derivations which inhibits excitatory neurons

Category

Rehabilitation

2

Description

Control group: Administration of 20cc of natural apple juice in which no drug or substance is dissolved as placebo one hour before the surgery.

Category

Placebo

Title and more details about the data/document

All collected data would be shared for all researchers after the participants were unidentified

When the data will become available and for how long

The access to data will be started 6 months after publication

To whom data/document is available

The data would only be available for people working in academic institutions.

Under which criteria data/document could be used

It is allowed to use the data for meta-analysis and systematic reviews.

From where data/document is obtainable

The data can be obtained via email, from the corresponding researches (Dr Sahand samiee rad). E-mail: samieerads@mums.ac.ir

What processes are involved for a request to access data/document

The new research proposal and the processes details should be e-mailed to corresponding researcher in order to get the access permission
