The effect of exercise therapy on the balance of patients after the acute phase of stroke through Telerehabilitation

Protocol summary

Study aim

The effect of exercise therapy on the balance of patients after the acute phase of stroke through remote rehabilitation with a group of patients receiving rehabilitation treatment without the therapist's supervision; Be compared.

Design

This study is a randomized clinical trial with parallel groups; The study population was 30 patients referred to Firoozgar and rasoul akram Physical Medicine and Rehabilitation Clinic.

Settings and conduct

30 patients referred to the physical medicine and rehabilitation wards of Rasoul Akram and Firoozgar hospitals who have passed the acute phase after stroke and are eligible for the study are randomly divided into two groups of 15 patients. And in a group of patients in the first session of the visit receive a training pamphlet of exercise exercises. Patient evaluation is done at the beginning of the study and at the end of the intervention and after one month and three months after the end of the sessions.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients with ischemic or hemorrhagic stroke who have hemiplegia and at least one month has passed since the stroke. Balance and gait of the injured patient and exclusion criteria: bilateral paralysis; Imbalance due to injury to the cerebellum or brainstem; Proprioception impairment of vestibular dysfunction; Neurological diseases other than stroke such as neuropathy and any underlying disease that prevents activity

Intervention groups

In the experimental group: they receive an educational video of sports exercises through a virtual communication network and then perform the exercises under the therapist's supervision via video call. Control group: Patients in the first session of the visit received a training pamphlet of sports exercises and they are asked

to do the exercises at home.

Main outcome variables

Berg Balance Scale-time up and go-falls efficacy scale

General information

Reason for update

I made a mistake in entering the start date of sampling. I want to replace it and confirm the actual sampling date.

Scientific title
The effect of exercise therapy on the balance of patients after the acute phase of stroke through Telerehabilitation

Public title
The effect of exercise therapy on the balance of patients after the acute phase of stroke through Telerehabilitation

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Patients with ischemic or hemorrhagic stroke who have hemiplegia. Evidence of brain damage by MRI or CTscan At least one month has passed since the stroke. Ability to execute a 3-step command Impaired balance and gait of the patient Be able to walk with or without support: and be in FAC II - IV. High-speed Internet access and telephony programs The presence of a knowledgeable family member next to the patient in all exercise sessions and distance conversation
Exclusion criteria:
Bilateral paralysis Injury to the cerebellum or brain stem Proprioception injury Unilateral hemianopsy / forgetfulness or any other visual impairment Vestibular dysfunction Neurological diseases other than stroke such as neuropathy Severe postural instability Orthopedic problems Significant cognitive problems Perceptual aphasia Underlying diseases that prevent exercise, such as cardiovascular disease

Ataxia following cerebral infarction

Primary outcomes

1

Description

BERG balance scale

Timepoint

Before the intervention - after the end of the intervention
- one month and three months after the end of the sessions

Method of measurement

BERG balance scale questionnaire

2

Description

Timed up and Go test

Timepoint

Before the intervention - after the end of the intervention
- one month and three months after the end of the sessions

Method of measurement

Stopwatch

3

Description

Fall efficiency scale

Timepoint

Before the intervention - after the end of the intervention
- one month and three months after the end of the sessions

Method of measurement

Persian questionnaire of falling efficiency scale

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: The educational video of the exercise program for the patient is sent in the first absentee communication and through the virtual network. It should be used in the treatment sessions. And the therapist ensures the proper implementation of exercise programs.

Category

Rehabilitation

2

Description

Control group: In the first session of the visit, an educational pamphlet is provided to the patient and the patient is taught how to perform the exercises correctly in the same session. The patient is asked to perform the exercises according to the above program.
