

Clinical Trial Protocol

Iranian Registry of Clinical Trials

28 Jun 2026

The effectiveness of cognitive-behavioral stress management using the remote care system (application) of Covid 19 patients on the severity and duration of symptoms of this disease, psychological symptoms, psychosocial adaptation, cognitive status and changes in the level of ferritin and CRP and Spo2 in the blood of Covid 19 patients.

Protocol summary

Study aim

Determining effectiveness of cognitive-behavioral stress management using the remote care system (application) of covid 19 patients on the severity and duration of symptoms of this disease, psychological symptoms, psychosocial adaptation, cognitive status and changes in the level of ferritin and CRP and Spo2 in the blood of covid 19 patients.

Design

Quasi-experimental study, with simple individual randomization using random number table tool in two groups of control and experimental, in parallel, one-way blind, with pretest and posttest, on 70 patients with covid 19

Settings and conduct

This research on covid 19 patients who have not been spend more than 5 days after the onset of their first symptoms and have been discharged from the Dr. gharazi isfahan hospital to continue quarantine at home and the mentioned psychological intervention is done online through the system (application) of remote care of covid 19 patients.

Participants/Inclusion and exclusion criteria

Covid 19 patients who have not been spend more than 5 days after the onset of their first symptoms and have been discharged from the hospital to continue quarantine at home and having a smartphone and being literate ; People who are too old or illiterate that to find information from them is difficult

Intervention groups

Cognitive-behavioral stress management using the remote care system (application) of covid 19 patients

Main outcome variables

severity and duration of symptoms of covid 19 disease;

psychological symptoms; psychosocial adaptation; cognitive status; changes in the level of ferritin and CRP and Spo2 in the blood of covid 19 patients

Scientific title
The effectiveness of cognitive-behavioral stress management using the remote care system (application) of Covid 19 patients on the severity and duration of symptoms of this disease, psychological symptoms, psychosocial adaptation, cognitive status and changes in the level of ferritin and CRP and Spo2 in the blood of Covid 19 patients.

Public title
Effect of cognitive-behavioral stress management on Covid 19 patients

Purpose
Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Covid 19 patients who have not been spend more than 5 days after the onset of their first symptoms and have been discharged from the hospital to continue quarantine at home. Having a smartphone Being literate

Exclusion criteria:

People who are too old or illiterate that to find information from them is difficult

Age

From **18 years** old to **70 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **70**

Randomization (investigator's opinion)

Randomized

Randomization description

The sample people are selected by simple individual randomization by roll of a dice (numbers 1, 2 and 3 in the experimental group and numbers 4, 5 and 6 in the control group).

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Health conditions studied

1

Description of health condition studied

Covid 19

ICD-10 code

U07.1

ICD-10 code description

COVID-19, virus identified

Primary outcomes

1

Description

Severity and duration of Covid 19 disease symptoms

Timepoint

Daily monitoring of symptoms of covid 19 disease, from the first day of entry into the study to 21 days

Method of measurement

Evaluation of symptom severity by daily fever measurement and body pain scoring with McGill Pain Questionnaire and weakness scoring with Energy / Fatigue subscale from Quality of Life Questionnaire. duration of covid 19 disease symptoms by daily symptom monitoring and number of days recorded that each of the subjects experiences symptoms

2

Description

Score of psychological symptoms (depression, anxiety and stress) in the 21-question questionnaire of depression, anxiety and stress Laweibond and Laweibond 1995

Timepoint

Perform pre-test before the intervention and post-test after the intervention

Method of measurement

Measurement of this variable using 21-question

questionnaire of depression, anxiety and stress
Laweibond and Laweibond 1995

3

Description

Psychosocial adaptation

Timepoint

Perform pre-test before the intervention and post-test after the intervention

Method of measurement

Measurement of this variable using the 160-question Bell Psychosocial Adjustment Questionnaire 1961

4

Description

cognitive status

Timepoint

Perform pre-test before the intervention and post-test after the intervention

Method of measurement

Measurement of this variable using the standard questionnaire of Mini-Mental State Examination of Folstein et al. 1975

5

Description

Changes in ferritin and C-reactive protein blood levels and saturation of peripheral oxygen of covid 19 patients

Timepoint

Perform pre-test before the intervention and post-test after the intervention

Method of measurement

Perform a blood test to check the serum level of ferritin and C-reactive protein in the blood and check the percentage of saturation of peripheral oxygen in the blood using a pulse oximeter in two stages, before and after the intervention.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: training cognitive and behavioral techniques for stress management using the covid 19 Remote Care System (application) that is given to these patients online

Category

Lifestyle

2

Description

Control group: for the control group, only routine medical and nursing care and recommendations and nutrition training is taught

Category

Rehabilitation

Title and more details about the data/document

All individual data of study participants will be shared
after Unidentifiable Persons

When the data will become available and for how long

Access permission, three months after printing the
results

To whom data/document is available

Researchers working in academic and scientific
institutions, health care workers

Under which criteria data/document could be used

Use to conduct similar research or to discover
relationships and correlations or to conduct structural
equation research and path analysis

From where data/document is obtainable

Communicate with Mr. Hossein Hosseini Naveh at E.mail:
mn.h.h.naveh@gmail.com

What processes are involved for a request to access

data/document

Documents will be sent to their email by providing
evidence of their Necessity need for data.
