Comparison of the effect of back massage by hand and hot towel on muscle pain and pulmonary function of patients undergoing open-heart surgery

Protocol summary

Study aim

Comparison of the effect of back massage by hand and hot towel on muscle pain and pulmonary function of patients undergoing open-heart surgery in the intensive care unit of selected Aja hospitals

Design

Three-group clinical trial with two intervention groups and one control group, non-blind test and randomized selection

Settings and conduct

This study will be performed on patients undergoing open-heart surgery in the intensive care unit of Shahid Doran Hospital in Shiraz in 2020-2021.

Participants/Inclusion and exclusion criteria

90 patients who met the necessary criteria for inclusion in the study, including satisfaction, not attending similar sessions, not suffering from mental retardation and alertness, and did not use drugs.

Intervention groups

Massage group: The patient will be in a comfortable position, ie sitting slightly bent forward, then stroke massage with dry and clean hands will be applied on the patient's back area on the second, third, and fourth days after the operation and for 20 minutes. Hot towel group: The patient will be in a comfortable position, ie sitting slightly bent forward, then a towel measuring 50×50 cm with a temperature of 42 ° C on the patient's back on the second, third and fourth days after Practice and apply for 20 minutes. Control group: will only receive routine care.

Main outcome variables

Pain intensity, pulmonary function

Scientific title

Comparison of the effect of back massage by hand and hot towel on muscle pain and pulmonary function of patients undergoing open-heart surgery

Public title

Comparison of the effect of back massage by hand and hot towel on muscle pain and pulmonary function

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

The satisfaction to participate in the study
Do not use massage and hot towels for the previous three months
Do not suffer from mental retardation
No drug addiction
Having full consciousness
Ability to communicate verbally and visually

Exclusion criteria:

Bleeding less than 200 cc per hour from the chest tube
Presence of a wound or skin disease in the back

Age

From **18 years** old to **75 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **90**

Randomization (investigator's opinion)

Randomized

Randomization description

90 patients will be selected based on the criteria for entering the study and based on the Target-based sampling method and will be randomly assigned to three groups of massage intervention, hot towel intervention, and control (30 people in each group). In this way, patients with code one will be placed in the group of massage intervention, code two with hot towel intervention and code three with control, and will continue until number 90.

Blinding (investigator's opinion)

Not blinded

Health conditions studied**1****Description of health condition studied**

Cardiovascular Diseases

ICD-10 code

I25.11

ICD-10 code description

Atherosclerotic heart disease of native coronary artery with angina pectoris

Primary outcomes**1****Description**

Pain Intensity

Timepoint

The second, third and fourth days after surgery

Method of measurement

Visual Analog Scale (VAS)

2**Description**

Pulmonary function

Timepoint

The second, third and fourth days after surgery

Method of measurement

Based on the results of incentive spirometry

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: The first group (massage therapy intervention): The patients will be in a comfortable position, ie sitting slightly bent forward, then stroke massage with dry and clean hands will be applied on the patient's back area on the second, third and fourth days after the operation and for 20 minutes.
