

Clinical Trial Protocol

Iranian Registry of Clinical Trials

26 Jul 2026

Evaluation of safety and efficacy of allogeneic adipose-derived mesenchymal stem cell administration in Bronchiolitis Obliterans Syndrome (BOS) after allogeneic hematopoietic stem cell transplantation.

Protocol summary

Study aim

1) Evaluation of mesenchymal stem cell administration's safety in patients with bronchiolitis obliterans syndrome after hematopoietic stem cell transplantation. 2) Evaluation of the effectiveness of mesenchymal stem cell administration in patients with bronchiolitis obliterans syndrome after hematopoietic stem cell transplantation.

Design

Single-arm non-randomized clinical trial (a pilot study).

Settings and conduct

1) Patients selection. 2) laboratory and pulmonary function tests for evaluation of bronchiolitis obliterans. 3) obtaining consent forms from patients' guardians. 4) manufacture of mesenchymal stem cells from adipose tissue. 5) administration of mesenchymal stem cells. 6) patients follow up and evaluations. 7) Record and publish data.

Participants/Inclusion and exclusion criteria

Patients under 16 years, transplantation has been done over the past year, FEV1<70% in spirometry, corticosteroid-resistant patients, absence of other concomitant infections.

Intervention groups

Intravenous injection of mesenchymal stem cells 1 million per kg for each individual patient.

Main outcome variables

Safety and efficacy of mesenchymal stem cell administration in patients with bronchiolitis obliterans.

Scientific title

Evaluation of safety and efficacy of allogeneic adipose-derived mesenchymal stem cell administration in Bronchiolitis Obliterans Syndrome (BOS) after allogeneic hematopoietic stem cell transplantation.

Public title

Safety and efficacy of Mesenchymal Stem Cell administration in Bronchiolitis Obliterans Syndrome.

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age below 16 years Allogeneic hematopoietic stem cell transplantation (HSCT) over the past year Forced Expiratory Volume in one second (FEV1) < 70 % (based on Pulmonary Function Test) Diagnosis of BOS in end-stage phase with the history and clinical evaluation by a pediatric pulmonologist, and the presence of air-trapping or small airway involvement in high-resolution computed tomography (HRCT) Absence of concomitant infections Irresponsible to full-dose corticosteroids Give the informed consent by the patients' legal guardians

Exclusion criteria:

Suspicion to any bacterial or viral pneumonia CMV, VZV, HSV and/or fungal pneumonia Haploidentical and/or T-cell deplete transplantation Prior history of allergy or sensitivity to drugs Relapse or progression of underlying malignancy

Age

From **1 month** old to **16 years** old

Gender

Approval date

2020-09-05, 1399/06/15

Ethics committee reference number

IR.TUMS.MEDICINE.REC.1399.406

Health conditions studied

1

Description of health condition studied

bronchiolitis obliterans

ICD-10 code

J84.115

ICD-10 code description

Respiratory bronchiolitis interstitial lung disease

Primary outcomes

1

Description

Forced expiratory volume in one second (FEV1)

Timepoint

Before intervention and then 1,3,6 months after intervention.

Method of measurement

Pulmonary Function Test (Spirometry)

2

Description

FEV1/FVC ratio

Timepoint

Before intervention and then 1,3,6 months after intervention.

Method of measurement

Pulmonary Function Test (Spirometry)

Secondary outcomes

1

Description

Fractional exhaled nitric oxide (FeNO)

Timepoint

Before intervention and then 1,3,6 months after intervention.

Method of measurement

FeNO test

Intervention groups

1

Description

Intervention group: mesenchymal stem cells from the donors' adipose tissue will be extracted and then cultured in the laboratory. Final products will be injected

with a dosage of 1 million per kg intravenously to the patients. All the patients will be hospitalized for 24 hours for further observation.

Title and more details about the data/document

The data regarding the primary and secondary outcomes without any identifiable personal data will be shared.

When the data will become available and for how long

Six months after the publication of the results of this study

To whom data/document is available

Investigators in academic institutions.

Under which criteria data/document could be used

Medical doctors or scientists who are conducting studies in the same subject including mesenchymal stem cell therapy or bronchiolitis obliterans.

From where data/document is obtainable

The data that support the findings of this study will be available on request from the corresponding author. The data will not be publicly available due to privacy and ethical considerations.

What processes are involved for a request to access data/document

The data that support the findings of this study will be available on request from the corresponding author. The data will not be publicly available due to privacy and ethical considerations.
