Assess the effectiveness of Sodium valproate on level of albuminuria in patient with type 2 diabetes :A double-blind randomized clinical trial

Protocol summary

Study aim

Evaluation of the effect of sodium valproate on albuminuria in type 2 diabetic patients through double-blind randomized clinical trial

Design

Clinical trial with control group, double-blind, randomized, phase 1-2 on 60 patients. For randomization, block randomization are used by randomization.com

Settings and conduct

This study is a double-blind randomized clinical trial that will be performed in the clinic of Shahid Motari and the clinic of Shahid Faghihi Hospital affiliated to Shiraz University of Medical Sciences.sodium valproate 200 mg of made by destin company daily in one group and twice a day in another group and also in the control group taking placebo.Valproic acid and placebo have exactly the same packaging and the patient and the prescribing physician will not know the type of prescription drug and only the analyzer is aware of the type of drug used by the patient according to the pre-written codes on the drug.

Participants/Inclusion and exclusion criteria

Entry requirements :Type 2 diabetic patients with microalbuminuria of more than 30 milligram in deciliter with an eGFR of more than 60 milliliter in a minute for 1.73 Square meters. No entry conditions : disturbing factors that affect urinary protein excretion such as hypothyroidism or hyperthyroidism, uncontrolled hypertension or diabetes or history of allergy to sodium valproate

Intervention groups

Patients are divided into three groups to evaluate the effect of sodium valproate on albuminuria: The control group that receives the placebo The group that receives sodium valproate at a dose of 200 milligram per day. The group that receives sodium valproate at a dose of 400 milligram per day.

Main outcome variables

level of microalbuminuria, glomerular filtration rate

Scientific title	Assess the effectiveness of Sodium valproate on level of albuminuria in patient with type 2 diabetes :A double-blind randomized clinical trial
Public title	Sodium Valproate and Diabetic nephropathy
Purpose	Treatment
Inclusion/Exclusion criteria	
Inclusion criteria:	patients with DMTII albuminuria more than 30mg/dl
Exclusion criteria:	Allergy to valproic acid Significantly abnormal liver function test A history of known mental disorders History of cardiac or liver diseases Females who were lactating, pregnant, or intending to become pregnant during the study. A current history of alcohol addiction or drug abuse including analgesics abnormal blood cells counts eGFR less than 60 ml/min/1.73m2 hemoglobin A1c more than 8 Blood Pressure more than 160/100 mmHg neurologic disease such as seizure use antidepressant or antipsychotic drugs History of GN, renal stone or other renal disease that induced proteinuria active hematologic, rheumatologic or infectious diseases active cancers or tumors uncontrol hypo or hyper thyroidism uncontrol hyper parathyroidism
Age	From 30 years old to 70 years old
Gender	Both
Phase	3
Groups that have been masked	• Participant • Investigator
Sample size	Target sample size: 60
Randomization (investigator's opinion)	Randomized
Randomization description	The people who enter the study with a block randomization method and using the randomization.com site 60 people are placed in a 20-item block .finally, Sixty people are assigned drugs in three ways.
Blinding (investigator's opinion)	Double blinded
Blinding description	Using a placebo with the same shape, color, smell, taste, and box as sodium valproate, the patient becomes blind to the type of drug (placebo or drug). The researcher who gives the drugs to the patients is not aware of the type of drug prescribed because the shape of the boxes is the same and only the code on the boxes is different. He/She does not aware of What do the codes mean and what kind of medicine does each code indicate.
Placebo	Used

Health conditions studied	
1	
Description of health condition studied	diabetic nephropathy
ICD-10 code	E11.21
ICD-10 code description	Type 2 diabetes mellitus with diabetic nephropathy
Primary outcomes	
1	
Description	microalbuminuria
Timepoint	At the beginning of the study, one month, two months and three months after starting the drug
Method of measurement	Measurement of microalbuminuria of urine samples
Secondary outcomes	
1	
Description	liver function test
Timepoint	At the beginning of the study, one month, two months and three months after starting the drug

Method of measurement

Using the patient's blood sample

2**Description**

complete blood count

Timepoint

At the beginning of the study, one month, two months and three months after starting the drug

Method of measurement

Using the patient's blood sample

Intervention groups**1****Description**

Intervention group1:twenty patients take sodium valproate 200 mg tablet of Destin company daily for 3 months

Category

Treatment - Drugs

2**Description**

Intervention group2: twenty patients take sodium valproate 200 mg of Destin company twice a day for 3 months

Category

Treatment - Drugs

3**Description**

Control group1: Twenty patients take a placebo made by Shiraz School of Pharmacy daily for three months.

Category

Treatment - Drugs
