

Clinical Trial Protocol

Iranian Registry of Clinical Trials

26 Jun 2026

The effect of direct irrigation of the third molar surgery site in comparison with rinsing the mouth after surgery in reducing surgical complications including pain, swelling, infection and alveolar osteitis in case of bilateral wisdom teeth in the mandible

Protocol summary

Study aim

Reduction of surgical complications including pain, swelling, infection and alveolar osteitis and increasing patient ease after impacted wisdom tooth surgery

Design

Clinical trial with control group, with parallel groups, with no blinding, randomized, phase 2 on 20 patients. In each patient, allocating to intervention or control group is determined by throwing a coin

Settings and conduct

Implantable surgery is performed in Ahvaz Oral and Maxillofacial Surgery Department affiliated to Ahvaz Dental School and no blinding has been performed

Participants/Inclusion and exclusion criteria

Inclusion criteria: Systemically healthy patient; Obtain informed consent; Patients whose wisdom tooth surgery is indicated. Non-inclusion criterion: taking any antibiotics, anti-inflammatory or analgesic drugs in the last week before surgery

Intervention groups

The intervention group rinsed the site of the operated wisdom tooth with a syringe containing 0.2% chlorhexidine, but the control group rinsed their mouth with 0.2% chlorhexidine after wisdom tooth surgery

Main outcome variables

Pain; swelling; infection; alveolar osteitis

Scientific title

The effect of direct irrigation of the third molar surgery site in comparison with rinsing the mouth after surgery in reducing surgical complications including pain, swelling, infection and alveolar osteitis in case of bilateral wisdom teeth in the mandible

Public title

Review the effect of direct irrigation after wisdom tooth surgery

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

All patients for whom bilateral mandibular impact wisdom tooth surgery is indicated The patient is systemically healthy obtain informed consent

Exclusion criteria:

Taking any anti inflammatory or analgesics drugs or antibiotics one week before surgery

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **20**

More than 1 sample in each individual

Number of samples in each individual: **2**

Study of two mandibular third molars in one patient

Randomization (investigator's opinion)

Randomized

Randomization description

Patients are randomly selected individually and then identified in each patient, allocating to intervention or control group is determined by throwing a coinsurgery.

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Health conditions studied

1

Description of health condition studied

The wisdom tooth surgery

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

The amount of pain after wisdom tooth surgery

Timepoint

One week after surgery

Method of measurement

Pain measurement based on Visual Analogue Scale

2

Description

The amount of swelling after wisdom tooth surgery

Timepoint

One week after surgery

Method of measurement

Based on three hypothetical plans (occlusal plan, the hypothetical lines is drawn 2cm forward and 2cm backward from the line perpendicular to the mandibular gonial notch plane)

3

Description

Infection occurrence one week after wisdom tooth surgery

Timepoint

One week after surgery

Method of measurement

Based on the observation of fever, sore throat and lymphadenopathy

4

Description

Alveolar osteitis occurrence after impacted wisdom tooth surgery

Timepoint

One week after surgery

Method of measurement

Based on the observation of empty dental socket without blood clots

Secondary outcomes

empty

Intervention groups

1

Description

Control group: The patient rinses his/her mouth with 0.2% chlorhexidine mouthwash (Iran najo co.) after 48 hours after surgery three times a day

Category

Treatment - Drugs

2

Description

Intervention group: the patient rinses the surgical site three times a day with a syringe containing chlorhexidine 0.2% (Iran najo co.) after 48 hours after surgery for one week

Category

Treatment - Drugs
