Iranian Registry of Clinical Trials

29 May 2026

Evaluation and comparison between Diltiazem gel 2% and lubricating gel effects on female with sexual dysfunction refer to psychosexual clinic

Protocol summary

Study aim

Evaluation and comparison between diltiazem gel 2% and lubricant gel in improving sexual function in women with sexual dysfunction

Design

Parallel clinical trial

Settings and conduct

Intervention groups include women referred to the psychosocial clinic of Taleghani Hospital who have sexual dysfunction and difficulty having sex with their partner. One group is given a lubricant gel and the other group is given diltiazem gel 2%, and at the beginning of the study and at the end of the fifth week, the change in women's satisfaction is measured with the FSFI criteria.

Participants/Inclusion and exclusion criteria

Patients' satisfaction to participate in the study: having sex for at least one year; sexual dysfunction and dissatisfaction with sex for at least 6 months

Intervention groups

This study is done in two groups. Patients are non-randomly divided into two groups and one group is given diltiazem gel 2% and the other group is given lubricant gel. This study will be done during 5 weeks, which FSFI will be evaluated at the beginning of the study and at the end of the fifth week.

Main outcome variables

Improve quality of life, increase sexual satisfaction

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
Simple Individual Randomization with the Card in Two Groups A and B, in this Way a Number of Cards are selected as the first Intervention Group and the same Number in the second Intervention Group, then by merging the Cards together one Card is drawn and its Allocation is recorded and the Card is returned to the other Cards after it has been removed. The Cards are then re-merged and another Card is withdrawn. The Process continues until a Random Sequence Sample Size is reached.

Blinding (investigator's opinion)
Not blinded

Health conditions studied

1

Description of health condition studied

Lack or loss of sexual desire

ICD-10 code

F52.0

ICD-10 code description

Hypoactive sexual desire disorder

Primary outcomes

1

Description

Improving sexual performance and satisfaction in women by measuring the increase of FSFI score

Timepoint

At the beginning of the study, the first week, the second week, the third week, the fourth week, the fifth week

Method of measurement

FSFI

Secondary outcomes

1

Description

Improving the quality and satisfaction of sexual intercourse in women

Timepoint

The beginning of the study and the end of the study

Method of measurement

Female Sexual Function Index (FSFI) questionnaire

Intervention groups

1

Description

Intervention group: In people with a history of sexual dysfunction, the effect of diltiazem topical gel 2% on improving sexual function is investigated. Thus, before starting the study and also after using diltiazem gel 2% for 5 times in a period of 5 weeks, the FSFI questionnaire should be filled in by the person participating in the study and the score changes in this intervention are measured. This gel is used externally in the outer part of the vagina. Also, for better effect, it should be used one hour before intercourse.
