Allergenicity and immunochemical characterization of five plant pollens

Protocol summary

Study aim

This study aimed to evaluate the allergenicity and immunochemical characterization of five plant pollens

Design

A clinical trial with a healthy control group and a group with seasonal allergies, on 47 patients.

Settings and conduct

The skin test was performed according to international protocols in a clinic under the supervision of asthma and allergy specialist. Then, up to 30 minutes after the test, the patient was examined for immediate hypersensitivity reactions. Other tests, such as electrophoresis and Western blot, were done in the research Laboratory of Birjand University of Medical Sciences,

Participants/Inclusion and exclusion criteria

Residents of Birjand who have referred to asthma and allergy specialist and Skin Prick test will be performed as a necessary diagnostic method for them and after the necessary explanations, be willing to participate in this research. Diagnosis of atopy in participants was made according to Hanifen and Rajka criteria. People who, for any reason, do not have a chance to draw blood after Skin Prick test or after test, the research team found that they were taking interfering drugs such as corticosteroids or have blood disorders with CBC and CRP factors or people with infectious diseases, cancer, immunodeficiency, and autoimmune diseases

Intervention groups

The study was performed on people who went to asthma and allergy clinic between the ages of 18 and 40

Main outcome variables

An immediate hypersensitivity reaction to the allergen may occur 15 minutes after the skin test and the patient is monitored for up to 30 minutes after the test.

Health conditions studied

1

Description of health condition studied

Allergies, allergic rhinitis

ICD-10 code

J30.1

ICD-10 code description

Allergic rhinitis due to pollen

Primary outcomes

1

Description

Skin test, wheal diameter

Timepoint

15 minutes after skin test

Method of measurement

mean wheal diameter greater than 3 mm compared to the negative control is considered as a positive answer

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: People who have been referred to an allergy clinic and Skin test were performed on them to check for sensitivity to any of the pollen extracts. These people had a positive Skin test for the pollen studied, and a Western blot test will be performed

Category

Diagnosis

2

Description

Control group: People who have been referred to an allergy clinic and Skin Prick test were performed on them to check for allergies to any of the pollen extracts. These people were not allergic to the pollen we studied
