Comparison of therapeutic effects of topical colloidal silver and topical clotrimasole in dermatophytosis

Protocol summary

Summary

(1) Objectives: Our aim in this study is to compare topical colloidal silver with topical clotrimasole in treating patients with dermatophytosis. (2) Design: This is a double blinded randomized clinical trail. Forty patients with staphylococcal-streptococcal skin infections and 40 ones with dermatophytosis referring to dermathology clinics, Sina Hospital, Tabriz will be included in the study after qualifying the inclusion and exclusion criteria and obtaining the informed consent. Patients will be randomly assigned to one of treatment groups. For randomizing the patients we will use Excel software (computerized randomization). (3) Setting and conduct: After randomizing the patients, one group will receive topical colloidal silver and the other will be administered with clotrimasole. Neither the patient nor the supervisor doctor are aware of the administered drug. Inclusion criteria are having superficial staphylococcal-streptococcal skin infections, being more than 4 years old, not having immune disorder and organ failure, not having history of allergy to silver compounds and clotrimasole and not using topical drugs in last two weeks in the site of lesion. Exclusion criteria are unwillingness to continue participation in the study, occurring a dermatological reaction due to drugs administered and any kind of drug reaction. (4) Interventions: Patients in the first group will receive topical colloidal silver three times a day for two weeks. In the other group patients will receive topical clotrimasole two times a day for four weeks. (5) Main outcome measures: Erythema, encrustation, inflammation and exudation will be evaluated before administering drugs and at the end of treatment period.

Scientific title

Comparison of therapeutic effects of topical colloidal silver and topical clotrimasole in dermatophytosis

Public title
Comparison of two kinds of topical drugs in treatment of dermatological infections
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria: superficial staphylococcal-streptococcal skin infections; age more than 4 years old; not having immune disorder and organ failure; not having history of allergy to silver compounds and clotrimasole; not using topical drugs in last two weeks in the site of lesion.
Exclusion criteria: unwillingness to continue participation in the study, occurring a dermatological reaction due to drugs administered; any kind of drug reaction.
Age
From **4 years** old to **149 years** old
Gender
Both

Phase
3
Groups that have been masked
No information
Sample size
Target sample size: **80**
Randomization (investigator's opinion)
Randomized
Randomization description
Blinding (investigator's opinion)
Double blinded
Blinding description
Placebo
Not used
Assignment
Parallel

Health conditions studied

1

Description of health condition studied
Dermatophytosis
ICD-10 code
B35.9
ICD-10 code description
Dermatophytosis, unspecified

2

Description of health condition studied
ůperficial staphylococcal-streptococcal skin infections
ICD-10 code
A49.1
ICD-10 code description
Streptococcal infection, unspecified site

Primary outcomes

1

Description
Erythema
Timepoint
Before starting the study and at the end of study
Method of measurement
Clinical evaluation and grading based on complete treatment, partial treatment and no treatment

2

Description
Encrustation
Timepoint
Before starting the study and at the end of study
Method of measurement
Clinical evaluation and grading based on complete treatment, partial treatment and no treatment

3

Description
Inflammation
Timepoint
Before starting the study and at the end of study
Method of measurement
Clinical evaluation and grading based on complete treatment, partial treatment and no treatment

4

Description
exudation
Timepoint
Before starting the study and at the end of study
Method of measurement
Clinical evaluation and grading based on complete treatment, partial treatment and no treatment

Secondary outcomes

empty

Intervention groups

1

Description
In the treatment group, patients will receive topical colloidal silver three times a day for two weeks.
Category
Treatment - Drugs

2

Description
In the control group patients will receive clotrimasole two times a day for four weeks.
Category
Treatment - Drugs
