The effect of cervical Hyoscine on the length of the first and second stages of labor of nulliparous women referred to Niknafs maternity hospital in Rafsanjan: A clinical trial

Protocol summary

Study aim

The effect of cervical hyoscine on the first and second stages length of labor in primiparous women referring to Niknafs hospital

Design

Clinical trial, with control group, with parallel groups, one blind, by randomization method through computer software will be divided into experimental and control groups.

Settings and conduct

This one-blind clinical trial will performe in 2021 on 120 primiparous women referring to Niknfs hospital in Rafsanjan. After explaining the purpose and period of the study and obtaining informed consent from the samples, they will assign in the experimental and control groups. The control group give one milliliter of single-dose distilled water with cervicovaginal syringes. All people should have at least 4 cm of dilatation and regular uterine contractions when administering cervicovaginal medication, and their membranes should be intact. The contents of the syringes and vaginal examinations will be injected by one person.

Participants/Inclusion and exclusion criteria

eligibility criteria: primiparas, full-term pregnancy, alive singleton with cephaic presentation, intact membranes people with a history of maternal medical diseases including cardiovascular diseases, tachycardia as well as vaginal bleeding, temperature above 38 ° C, history of conization and cervical resection by loop electric method will be excluded from the study.

Intervention groups

The experimental group give one milliliter dose of Hyoscine (equivalent to 20 mg) and the control group give one milliliter distilled water with needleless syringes (the drug will be poured on the upper edge of the cervix).

Main outcome variables

The length of the first and second stages of labor

Randomization (investigator's opinion)

Randomized

Randomization description

random assignment by computerized method. 60 words of intervention and 60 words of control are given to the computer to randomly arrange them. This way we have a list in which 60 intervention words and 60 control words are randomly mixed. Then, eligible samples assign in intervention or control groups following this arrangement.

Blinding (investigator's opinion)

Single blinded

Blinding description

parturient are not going to be aware of the agents that be used in their vagina.

Health conditions studied

1

Description of health condition studied

The length of second stages of labor of neonate

ICD-10 code

ICD-10 code description

2

Description of health condition studied

The length of the third stage of labor

ICD-10 code

ICD-10 code description

3

Description of health condition studied

Apgar score of one and five minute

ICD-10 code

ICD-10 code description

4

Description of health condition studied

postpartum abnormal hemorrhage

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

The length of the first stage of labor

Timepoint

once after delivery

Method of measurement

According to the contents of the patient file, the time interval between dilatation is 4 cm until complete dilatation

2

Description

Length of the second stage of labor

Timepoint

once after delivery

Method of measurement

According to the contents of the patient file, the interval between complete dilatation and complete departure of the fetus

Secondary outcomes

1

Description

The length of the third stage of labor

Timepoint

after placental delivery

Method of measurement

According to the contents of the patient file, the time interval between the complete departure of the fetus and the time of the departure of the placenta

2

Description

neonate Apgar score

Timepoint

first and fifth minute after delivery

Method of measurement

Apgar score in the first and fifth minutes after birth

3

Description

Postpartum hemorrhage

Timepoint

two hours postpartum

Method of measurement

Bleeding up to two hours after delivery and diagnosis based on the measures needed to manage postpartum hemorrhage and diagnose midwife

Intervention groups

1

Description

Intervention group: The test group is given a single dose of 1 ml hyoscine vial (equivalent to 20 mg) with needleless syringes cervicovaginally (the drug will be poured on the upper edge of the cervix). All people should have at least 4 cm of dilatation and regular uterine contractions when administering cervicovaginal medication, and their water bag should be healthy.

Category

Treatment - Other

2

Description

Control group: The control group is given 1 ml of single-

dose distilled water with needleless syringes of the cervix (the drug is poured on the upper edge of the cervix). When using cervical medicine, all people should have at least 4 cm of regular uterine dilation and contraction, and their bladder should be healthy.
