Evaluating the Effect of melatonin on mechanically ventilated COVID 19 patients in Intensive care unit

Protocol summary

Study aim

Evaluating the effect of melatonin as an adjuvant therapy on the mortality and the duration of mechanical ventilation in ICU admitted COVID 19 patients

Design

Permuted block randomization will be used to randomize patients in melatonin and control group. this is an open labeled study without blinding (phase 1 trial with 33 patients)

Settings and conduct

66 intubated patients with COVID-19 infection who admitted to the Intensive care unit (Baharloo hospital, Tehran) were randomized to receive either 21mg melatonin or placebo for 5 days. Patients Main outcomes are the duration of mechanical ventilation requirements, and mortality.

Participants/Inclusion and exclusion criteria

Inclusion criteria: all COVID19 patients more than 18 years old at first day of intubation Exclusion criteria: hepatic failure- liver enzyme more than 5 time of upper normal limit

Intervention groups

Patients will be randomized to receive either melatonin or placebo

Main outcome variables

Main outcomes are the duration of mechanical ventilation requirements, and mortality.

Scientific title

Evaluating the Effect of melatonin on mechanically ventilated COVID 19 patients in Intensive care unit

Public title

Evaluating the Effect of melatonin on mechanically ventilated COVID 19 patients

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

all covid-19 patients admitted to the ICU Mechanically ventilated patients within the first 24 hours of intubation

Exclusion criteria:

liver enzyme more than 5 times of normal upper limit

Age

From **18 years** old

Gender

Both

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: **66**

Randomization (investigator's opinion)

Randomized

Randomization description

patients were randomized using Allocation random software (version 2.0) through random block sizes of 4 and 6 with an allocation ratio of 1:1, to receive either melatonin or placebo. this is an open labeled study without blinding

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

U07.1 COVID-19, virus identified

Primary outcomes

1

Description

In ICU Mortality Percent

Timepoint

At the end of the study

Method of measurement

The Number of Alive patients at the end of the study in each group

2

Description

the duration of the mechanical ventilation

Timepoint

at the end of the study

Method of measurement

Calculating the total days of mechanical ventilation

Secondary outcomes

empty

Intervention groups

1

Description

Patients in melatonin group will receive 21mg of melatonin (Razak) every night for 5 days through nasogastric tubr

Category

Treatment - Drugs

2

Description

Control group: Placebo group will receive placebo produced by Razak Company, every night for 5 nights

Category

Placebo
