Comparison of Two Different Rotary Instruments (RaCe, ProTaper) on Postoperative Pain in Teeth with Asymptomatic Irreversible Pulpitis: A Randomized Clinical Trial

Protocol summary

Summary

Comparison of two different rotary instruments (RaCe, ProTaper) on postoperative pain in teeth with asymptomatic irreversible pulpitis: A Randomized Clinical Trial Inclusion criteria: Teeth with asymptomatic irreversible pulpitis; normal radiographic periapical appearance. Exclusion criteria: Subjects under 20 years of age and over 50 years of age; any systemic diseases; nursing and pregnant women; allergies to lidocaine; reversible pulpitis; symptomatic irreversible pulpitis; pulpal necrosis; PDL widening; periapical radiolucency; teeth with fixed partial dentures; use of any analgesics for at least 12 hours before enrollment in the study. A total of 78 patients (male or female) 20-50 years of age with a first or second mandibular molar with asymptomatic irreversible pulpitis will enrolled in the study. Patients will undergo treatment randomly by choosing a packet in which the type of the instrument is written as follows A: ProTaper and B: RaCe groups (39 patients in each group). After initial working length record, in each group the instruments will be used to prepare canals in a manner according to the manufacturer instructions. The patients will be asked to mark their pain using visual analogue scale at 4-, 12-, 24-, 48- and 72-hour and 1-week postoperative intervals. Finally data will be analyzed. The patients will be blinded to the types of the instruments used (single blind).

Scientific title

Comparison of Two Different Rotary Instruments (RaCe, ProTaper) on Postoperative Pain in Teeth with Asymptomatic Irreversible Pulpitis: A Randomized Clinical Trial

Public title

Pain Measurement after Root Canal Treatment

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria: Subjects 20-50 years of age; no systemic diseases; teeth with asymptomatic irreversible pulpitis; normal radiographic periapical appearance. Exclusion criteria: Subjects under 20 years of age and over 50 years of age; any systemic diseases; nursing and pregnant women; allergies to lidocaine; reversible pulpitis; symptomatic irreversible pulpitis; pulpal necrosis; PDL widening; periapical radiolucency; presence of internal or external resorption; teeth with fixed partial dentures; no bleeding after pulp exposure; use of any analgesics for at least 12 hours before enrollment in the study.

Age

From **74 years** old to **43 years** old

Gender

Assignment

Parallel

Other design features

Since the patients will be blinded to the types of the instruments used, this study was considered a single-blind one. Patients will undergo treatment randomly by choosing a packet in which the type of the instrument is written (there will be 78 packets).

Health conditions studied

1

Description of health condition studied

Asymptomatic Irreversible Pulpitis

ICD-10 code

K04.0

ICD-10 code description

Irreversible Pulpitis

Primary outcomes

1

Description

Intensity Postoperative Pain after Root Canal Treatment

Timepoint

at 4-, 12-, 24-, 48- and 72-hour and 1-week after root canal treatment

Method of measurement

Visual Analogue Scale(VAS)

Secondary outcomes

1

Description

The Number of Analgesic Tablets Taken

Timepoint

at 4-, 12-, 24-, 48- and 72-hour and 1-week after root canal treatment

Method of measurement

Record by patient

Intervention groups

1

Description

ProTaper rotary instruments (Dentsply-Maillefer, Ballaigues, Switzerland) will be used for the root canal treatment procedures with the crown-down technique based on manufacturer's instructions. Each file will be used to prepare only 8 root canals. The root canals will be obturated with gutta-percha and AH26 sealer (Dentsply,De Trey,Konstanz,Germany).
