In- Vivo Bioequivalence study of Lenalidomide cap. 25mg Sobhan Oncology (LENASOB® 25mg) with brand drug (REVLIMID® 25mg Colgene, Bristol-Myers Squibb) in Iranian healthy volunteers

Protocol summary

Study aim

In- Vivo Bioequivalence study of Lenalidomide cap. 25mg Sobhan Oncology Pharma with brand drug (REVLIMID® 25mg,Colgene, Bristol-Myers Squibb) in Iranian healthy volunteers.

Design

Single dose, randomized, two sequences, two period crossover with a washout period.

Settings and conduct

This study will be conducted in one-way, cross-over and fasting, and on two sets of healthy volunteers. The study will be conducted in two periods of 72 hours. The interval between these two periods, which is called the wash-out time, is determined by the half-life of the drug plasma, which according to scientific sources should be at least 5 to 7 half-life of the drug in the case of the drug under study. The plan will take a week to clean up the drug, given the biological half-life of the drugs in the drug form. In the first round, candidates are divided into two groups, and the first group receives a test tablet and the second group receives a similar tablet. Blood samples will be taken by the volunteer by the technician immediately after taking the drug, and the preparation steps of the samples, including plasma separation and drug extraction, are performed to analyze the amount of drug on them.

Participants/Inclusion and exclusion criteria

24 participants will be selected from non-smoking, not pregnant people with no history of heart, kidney and liver disease or dis functions with both sex (male&female). The ages and BMIs of participant should be in the range of 18-60 and 18-28 respectively

Intervention groups

Intervention group Single dose Lenalidomide cap. 25mg Sobhan Oncology Pharma Company with brand drugs (REVLIMID® 25mg, Colgene, Bristol-Myers Squibb)

Main outcome variables

Determination of blood drug concentration.

Scientific title

In- Vivo Bioequivalence study of Lenalidomide cap. 25mg Sobhan Oncology (LENASOB® 25mg) with brand drug (REVLIMID® 25mg Colgene, Bristol-Myers Squibb) in Iranian healthy volunteers

Public title

Lenalidomide cap. 25mg Sobhan Oncology (LENASOB® 25mg), In-Vivo Bioequivalence in Iranian healthy volunteer.

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

General health(liver, heart, kidney) Body mass index(18-28) Informed consent Age(18-60)

Exclusion criteria:

Smoking A history of cardiovascular disease A history of liver & kidney disease Pregnancy Alcohol & Drug addiction Hypersensitivity to the drug

Age

From **18 years** old to **60 years** old

Gender

Both

Phase

Bioequivalence

Groups that have been masked

- Participant

Sample size

Target sample size: **24**

Randomization (investigator's opinion)

Randomized

Randomization description

People in different age groups are invited to cooperate through the advertisement. Then people are selected. Individuals will be randomly selected through advertisements. The number of individuals will be randomly selected and the first twelve will be selected as the first sequence and the second twelve will be selected as the second sequence.

Blinding (investigator's opinion)

Single blinded

Blinding description

Candidates are not aware of the test drug or brand name.

Placebo

Health conditions studied**1****Description of health condition studied**

In this study, the disease is not examined. Subject bioequivalence test and reference tablets Teriflunomide studied.

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

Determination of blood drug concentration.

Timepoint

Sampling times in this study will be 0, 1, 2, 2:30, 3, 3:20, 3:40, 4, 4:20, 4: 40, 5, 6, 8, 10, 12, 24, 48, 72 hours After prescribing the tablet.

Method of measurement

High Performance Liquid Chromatography with tandem mass spectroscopy detector

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: Intervention group received one test drug table(Lenalidomide cap. 25mg Sobhan Oncology Pharma). Blood samples were taken from the volunteers for 72 hours at the mentioned times after drug administration and the concentration of LENASOB in blood samples was measured by liquid chromatography with mass spectroscopy detector.
