

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Evaluation of the effectiveness of interlipid infusion for patients with a history of 2 unsuccessful embryo transfers

Protocol summary

Study aim

Study of interlipid infusion efficacy in patients with a 2-time embryo transfer in the infertility center of Mazandaran University of Medical Sciences

Design

This clinical trial had a control group with parallel randomized groups with 80 patients, of which 40 were in the intervention group and 40 were in the control group.

Settings and conduct

This study is performed in the infertility center of Imam Khomeini Hospital in Sari • 80 patients are randomly placed in the control and intervention group who inject 20% solution of interlipid into the intervention group before embryo transfer and then transfer, the initial result of a positive test Pregnancy is possible, also this study is one-sided blind and the patient is considered blind

Participants/Inclusion and exclusion criteria

All mothers with a history of infertility are sampled. Patients who have been sampled have a history of 2 with embryo transfer. Mothers with dangerous chromosomal abnormalities, antiphospholipid syndrome or a positive thrombophilia test, mothers with endocrine disorders, hyperlipidemia, allergies to eggs and their products are excluded from the study. Mothers over the age of 40 were also considered our exclusion criteria.

Intervention groups

Intervention group (Intralipid receptor): Intralipid receptor 20% solution in 250 cc of sterile saline, which is administered within two hours. Once between days 4 to 9 of ovarian stimulation and again on day 7 with a positive pregnancy test. Control group of 40 people: the group that does not receive the intervention

Main outcome variables

Positive pregnancy test; wife fetal heart in week 6

transfers

Public title

Evaluation of the effectiveness of intralipid infusion for patients with a history of 2 unsuccessful embryo transfers

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patients who have a history of 2 embryo transfers are sampled. Patients who are over 18 to 40 years old and have the necessary criteria for the IVF process All mothers with a history of infertility

Exclusion criteria:

Mothers with dangerous chromosomal abnormalities
Mothers with dangerous abnormalities of antiphospholipid syndrome or positive thrombophilia test
Mothers with endocrine disorders Mothers with hyperlipidemia disorders Mothers who were allergic to eggs and their products Mothers over 40 years old

Age

From **18 years** old to **40 years** old

Health conditions studied

1

Description of health condition studied

Recurrent implantation failler

ICD-10 code

N98.9

ICD-10 code description

Complication associated with artificial fertilization, unspecified

Primary outcomes

1

Description

Positive pregnancy test

Timepoint

Two weeks after transfer

Method of measurement

In Imam Khomeini Infertility Center, pregnancy test is performed by ELISA method

Secondary outcomes

1

Description

Record fetal heart rate at 6 weeks of gestation

Timepoint

Six weeks of pregnancy

Method of measurement

sonography

Intervention groups

1

Description

Control group: Intervention group (Intralipid receptor): Intralipid receptor 20% solution in 250 cc of sterile saline, which is administered within two hours. Once between days 4 to 9 of ovarian stimulation and again on day 7 with a positive pregnancy test.
