The effectiveness of storytelling on social anxiety in children with burns admitted to hospital in Ahvaz Taleghani

Protocol summary

Study aim

Assessing the effectiveness of storytelling on social anxiety in children with burns admitted to hospital in Ahvaz Taleghani

Design

Clinical trial with two intervention and control groups for children aged 4 to 12 years with a history of burns and hospitalization due to burns

Settings and conduct

The samples will be divided into intervention (n = 21) and control (n = 21) groups. The division of individuals into groups will be random and an attempt will be made to match the groups so that both groups have equal conditions. Then the child and his family will answer the questionnaires to participate in the study includes 2 questionnaires of children's demographic information and the questionnaire of social anxiety Watson and Friend (1969).

Participants/Inclusion and exclusion criteria

Age 4 to 12 years, having a history of burns and hospitalization due to burns, the consent of the child and her family to participate in the study and the ability to answer the questions of the questionnaires used

Intervention groups

Both groups will complete the demographic and social anxiety questionnaires. The intervention group will then receive storytelling training in 13 session.

Main outcome variables

Anxiety; quality of life; hospitalization

Title and more details about the data/document

Changes in the quality of treatment will be published as
a result of story telling training activities in the treatment
of children .

When the data will become available and for how long

The accessibility to data , will be one year after
publication of the results .

To whom data/document is available

The data and other documents can only be used by
researchers working in academic institutions .

Under which criteria data/document could be used

The results of the study can be used to complete the
research of academic researchers on patients with burn
anxiety.

From where data/document is obtainable

In order to access the results of the studies, it is possible
to contact Ms. Ashraf-o-Sadat Hakim (listed in the Clinical
Trial Registration Center of Iran) through various
communication channels.

What processes are involved for a request to access data/document

Six months after the publication of the results, the
applicant can send a request for the use of data and
documents through the communication channels listed in
the Iranian Clinical Trial Registration, and at least three
months from the date of the request, an appropriate
response will be provided to their request .
