Effect of Supplementary Anesthesia of Mental Incisive Nerve Block, and Buccal Infiltration on Anesthetic Success of Inferior Alveolar Nerve Block, using 4% Articaine in Mandibular First Molars with Symptomatic Irreversible Pulpitis: A Double Blind Randomized Clinical Trial

Protocol summary

Study aim

Determination of the effect of Supplementary Incisive nerve block and buccal infiltration on the success of inferior alveolar nerve block, using 4% articaine on anesthesia of mandibular first molars with symptomatic irreversible pulpitis

Design

Clinical trial with control group, with parallel groups, double-blind, randomized, phase 3 on 75 patients. A random number table was used for randomization.

Settings and conduct

A total of 75 patients with inclusion criteria who referred to Alborz Dental Clinic in Urmia.

Participants/Inclusion and exclusion criteria

Criteria for inclusion in this study include healthy adults aged 18 to 60 years, first molars with irreversible pulpitis on one side of the mandible, and normal periapical radiographs. Exclusions of this study include systemic disease, patients with severe stress, patients with toothache at the time of study, unstable heart disease, sensitivity to 4% articaine anesthetic with epinephrine or latex, facial or oral paraesthesia, use of any analgesic in the 12 hours before treatment, the use of psychotropic and neurological drugs, asymptomatic irreversible pulpitis, the presence of periapical radiolucency, pregnancy, lactation, irreparable teeth and the presence of veneers on the teeth.

Intervention groups

1. The group receiving the incisor nerve block supplemental anesthesia
2. The group receiving the infiltration supplemental anesthesia
3. The group that does not receive any supplemental anesthesia

Main outcome variables

Intensity of pain

Scientific title

Effect of Supplementary Anesthesia of Mental Incisive Nerve Block, and Buccal Infiltration on Anesthetic Success of Inferior Alveolar Nerve Block, using 4% Articaine in Mandibular First Molars with Symptomatic Irreversible Pulpitis: A Double Blind Randomized Clinical Trial

Public title

The effect of Supplementary Anesthesia of Mental Incisive Nerve Block and Buccal Infiltration on the Success of Inferior Alveolar Nerve Block

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patients with symptomatic irreversible pulpitis in the mandibular permanent first molars Healthy adults aged 18 to 60 years Normal periapical radiograph

Exclusion criteria:

Existence of systemic disease Patients with severe stress Patients with toothache at the time of study Unstable heart disease Allergy to 4% articaine anesthetic with epinephrine or latex Facial or oral paraesthesia Use any painkiller 12 hours before treatment Taking psychotropic drugs Asymptomatic irreversible pulpitis cases Presence of periapical radiolucency Pregnancy and lactation Irreparable teeth and the presence of crowns on the teeth

Age

From **18 years** old to **60 years** old

Gender

Both

Phase

3

Groups that have been masked

- Participant
- Care provider
- Investigator

Sample size

Target sample size: **75**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization is done in a simple, individual way with the help of Random.org and by the assistant. Patients were divided into three treatment groups using random numbers generated by Random.org.

Blinding (investigator's opinion)

Double blinded

Blinding description

This study will be double-blind in the sense that both patients and the person evaluating the results will not be aware of the study conditions. The person in charge of analyzing and interpreting the data also does not know how to choose.

Health conditions studied

1

Description of health condition studied

irreversible pulpitis

ICD-10 code

B95

ICD-10 code description

Streptococcus and staphylococcus as the cause of diseases classified to other chapters

Primary outcomes

1

Description

anesthesia

Timepoint

Once every 4 minutes, up to 15 minutes after anesthesia injection

Method of measurement

Electric Pulp Tester

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: After inferior alveolar nerve block,

supplementary anesthesia of mental nerve block is performed for this group .

Category

Treatment - Drugs

2

Description

Intervention group: After inferior alveolar nerve block, additional infiltration anesthesia is performed for this group.

Category

Treatment - Drugs

3

Description

Control group: Only Inferior alveolar nerve block anesthesia is performed for this group.

Category

Treatment - Drugs
