

Clinical Trial Protocol

Iranian Registry of Clinical Trials

19 Sep 2026

Evaluation and comparison of success rate in laryngeal mask implantation with three anterior airway maneuvers and classical method

Protocol summary

Study aim

Evaluation and comparison of success rate in laryngeal mask implantation with three anterior airway maneuvers and classical method

Design

Clinical trial with control group with parallel groups, phase 3 on 110 patients

Settings and conduct

This study is performed in Feyz Hospital in Isfahan. Patients are intubated in two ways and the success rate and complications in both groups will be evaluated and compared with each other.

Participants/Inclusion and exclusion criteria

Inclusion criteria: age between 20 to 80 years, ASA class one and two, weight 40-80 kg, body mass index less than 35, mouth opening at least 25 mm. Exclusion criteria: mouth opening less than 25 mm, pregnancy, supraglottic anatomical abnormalities, neck extension limitation, cervical spine abnormality, dysphagia, sore throat

Intervention groups

Intervention group 1: In this group, patients undergo intubation through the laryngeal mask using three airway maneuvers from the front. After intubation, the success rate of intubation in patients as well as its complications such as laryngospasm are examined by an anesthesiologist. Intervention group 2: In this group, patients undergo intubation through the classic method. After intubation, the success rate of intubation in patients as well as its complications such as laryngospasm are examined by an anesthesiologist.

Main outcome variables

Success rate, complications of intubation

Title and more details about the data/document

All data can be shared after people have requested.

When the data will become available and for how long

Six months after publishing the results.

To whom data/document is available

Academic researchers

Under which criteria data/document could be used

Scientific uses

From where data/document is obtainable

Isfahan University of Medical Sciences website

What processes are involved for a request to access data/document

Clear request on the site to access the data by the individual and then review the request by the research assistant within 2 weeks and then allow access to the data.
