Sample size

Target sample size: 90

Randomization (investigator's opinion)

Randomized

Randomization description

Patients are distributed in two groups by simple random allocation method. To do this, the letter A is written on 45 cards and the letter B is written on 45 cards, and all the cards are placed in a box and mixed well. Patients take a card out of the box when they visit and the patient is assigned to the intervention or control group according to what is written on the card.

Blinding (investigator's opinion)

Double blinded

Blinding description

The study is done in two blinds. Patients and the person evaluating the outcome of treatment are unaware of the type of medication used by patients. Drugs are prepared in similar packages and coded by the project manager and are provided to patients for consumption.
