The effects of *Melissa officinalis* on Stress, Anxiety, Depression, sleep disturbances and Compassion Fatigue among Nurses Caring for COVID-19 Patients

Protocol summary

Study aim

Determining the effects of melissa officinalis on stress, anxiety, depression, sleep disorders and compassion fatigue among Nurses Caring for COVID-19 Patients

Design

Clinical trial with control group, with parallel groups, double-blind, randomized, phase three on 88 nurses, for randomization, Android Statistics and sample size software will be used.

Settings and conduct

The researcher will refer to Ayatollah Rouhani Hospital in Babol and coronavirus patients' wards, and the nurses will be selected according to their inclusion and randomization criteria based on Android statistical software. Questionnaires will be completed (demographic characteristics, stress, anxiety and depression, Petersburg sleep quality, and compassion fatigue). Nurses in the experimental group will be given lemon balm tea and the placebo group will be given black tea twice a day (morning and evening) for 21 days after the intervention (for twenty-one days or three weeks) again in the fourth week. The mentioned questionnaires will be completed by the nurses of both groups and will be collected with the help of the researcher in different shifts. Nurses and researchers will be blind to the type of tea consumed.

Participants/Inclusion and exclusion criteria

At least a degree in nursing; Having one year of work experience and at least six months of care for coronavirus patients; No history of asthma, allergies, and chronic diseases; Lack of stressful events in the last three months.

Intervention groups

Nurses in the experimental group will be given lemon balm tea in a 3-gram bag from Newsha twice (morning and evening) for 21 days. Nurses of the placebo group will be given black tea in the form of a 3 gram bag (Tea-

bag) from Newsha twice (morning and evening) for 21 days

Main outcome variables

Determining the level of stress, anxiety, depression in nurses

Scientific title

The effects of Melissa officinalis on Stress, Anxiety, Depression, sleep disturbances and Compassion Fatigue among Nurses Caring for COVID-19 Patients

Public title

The effects of Melissa officinalis on Stress, Anxiety, Depression, sleep disturbances and Compassion Fatigue among Nurses

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

Having at least a degree in nursing : Having one year of work experience : At least six months of care for hospitalized patients with coronavirus

Exclusion criteria:

Have a history of asthma, allergies, and chronic diseases : Stressful events such as divorce and the death of loved ones for any reason in the past three months

Age

From **23 years** old

Gender

Both

Phase

3

Groups that have been masked

- Participant
- Investigator

Sample size

Target sample size: **88**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization will be performed using the permutation block method. In this study, the size of each block is considered 4. Each block will have an equal number of intervention and control groups (2 from each) in random order. Randomization is written by a statistician and sample size expert using Android software. Similar envelopes will be considered for the number of nurses. The type of intervention will be written inside each envelope. The number of orders will be written on the envelopes. After entering the study, one of these envelopes will be assigned to each of the nurses and the relevant code will be recorded in the checklist.

Blinding (investigator's opinion)

Double blinded

Blinding description

Both tea bags of lemon balm and black tea will be similar in appearance, size and weight (3 grams) and will be unknown from Newsha products and the type of bags. The nurses studied will not be aware of the type of tea. The researcher will be blind to the type of tea consumed

for each nurse.

Primary outcomes

1

Description

Stress score on DASS-21

Timepoint

At the beginning of the study and 21 days after starting to consume lemon balm

Method of measurement

DASS-21 questionnaire

2

Description

Anxiety score on DASS-21

Timepoint

At the beginning of the study and 21 days after starting to consume lemon balm

Method of measurement

DASS-21 questionnaire

3

Description

Depression score on DASS-21

Timepoint

At the beginning of the study and 21 days after starting to consume lemon balm

Method of measurement

DASS-21 questionnaire

Secondary outcomes

1

Description

Sleep Disorders Score

Timepoint

At the beginning of the study and 28 days after giving lemon balm tea

Method of measurement

Petersburg Sleep Quality Questionnaire

2

Description

Compassion fatigue score

Timepoint

At the beginning of the study and 28 days after giving lemon balm tea

Method of measurement

Figley Compassion Fatigue Questionnaire

Intervention groups

1

Description

Intervention group: Nurses will be given lemon balm tea in the form of a 3 gram bag from Newsha twice (morning and evening) for 21 days.

Category

Treatment - Other

2

Description

Control group: Nurses will be given black tea in the form of a 3 gram bag (Tea-bag) from Newsha company twice (morning and evening) for 21 days.
