

Clinical Trial Protocol

Iranian Registry of Clinical Trials

03 Jun 2026

Effects of administrated placebo on physical fitness in adolescents with normal weight.

Protocol summary

Study aim

1- To determine the efficacy of administered placebo in enhancing the physical fitness in adolescents. 2- To check the relationship between administered placebo and motivation level in adolescents.

Design

RCT

Settings and conduct

Schools of Islamabad/ Rawalpindi.

Participants/Inclusion and exclusion criteria

Inclusion Criteria □ Healthy Adolescents of Rawalpindi/Islamabad. □ Age: 10-19 (According to WHO) both genders, after taking written consent of participants from their parents/ guardians. Exclusion Criteria □ Diagnosed cases of acute or chronic diseases □ Adolescent with any deformity or Psychological illness □ Family history of sudden cardiac death, comorbidities (Asthma and Diabetes) □ History of exercise associated with dizziness, pre-syncope or collapse □ Refusal of giving informed consent

Intervention groups

1- Control group 2- Experimental group Control group: Control group adolescents will be pre-tested on four fitness tests (sit & reach test, reduced cooper test, broad jump and 20 meter running) and motivation level using Physical activity and leisure motivation scale PALMS by the first investigator. Then there would be a break of 30 minutes in which they will only receive water. After that, all the participants will be Post- tested on the basis of same fitness tests and motivation scale as mentioned above. Experimental group: In this group adolescents will be pre-tested on the same fitness tests and motivation as mentioned above. Then in the break these adolescents will be given placebo drink (included water + red food color) along with leaflet (statement written reinforcing the effect of placebo drink), and will be post tested by using same tests as mentioned in control group.

Main outcome variables

Distance Time Exertion Motivation Pulse rate

Scientific title
Effects of administrated placebo on physical fitness in adolescents with normal weight.

Public title
Effects of administrated placebo on physical fitness in adolescents with normal weight.

Purpose
Health service research

Inclusion/Exclusion criteria
Inclusion criteria:
□ Healthy Adolescents of Rawalpindi/Islamabad. □ Age: 10-19 (According to WHO) both genders, after taking written consent of participants from their parents/guardians.
Exclusion criteria:
□ Diagnosed cases of acute or chronic diseases □ Adolescent with any deformity or Psychological illness □ Family history of sudden cardiac death, comorbidities (Asthma and Diabetes) □ History of exercise associated with dizziness, pre-syncope or collapse □ Refusal of giving informed consent

Age
From **10 years** old to **19 years** old

Gender
Both

Phase
N/A

Groups that have been masked

- Participant
- Investigator

Sample size
Target sample size: **111**
Actual sample size reached: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
The randomization method was used, the participants were assigned in control and experimental group through sealed enveloped method. Procedure of Randomization: No: of Participants=60 Material used: - 60 Envelops - 60 Sheets of properly cut Aluminum paper double the size of the paper. - 60 Sheets of Carbon paper, cut in to appropriate size according to the paper used. Procedure: Step I - A standard sized square paper was taken in which group "A" was marked. In this way 30 papers were prepared marked with "A" and 30 squared shaped paper marked with "B". Step II The sheet of paper on which either A or B was marked were folded to fit the envelop. Step III A sheet of Carbon paper was placed on the top of the folded paper (marked either A or B) facing the envelop. Step IV Then the sheet of Aluminum foil was wrapped on the carbon paper (with folded paper inside). Step V All the above prepared were placed in the envelop (which was completely opaque), the enveloped was then sealed. Step VI In this way 30 envelops of "A" and 30 envelops of "B" were prepared. with a total

number of 60 envelops. Step VII - These 60 envelops were then thoroughly shuffled like deck of cards. - The envelops were then marked with number 1-60. Each participants picked the envelop in order from 1-60 and was given placebo (water or drink) accordingly.

Blinding (investigator's opinion)
Double blinded

Blinding description
The second investigator was blinded to avoid biasness and water was given to control group and placebo to the experimental group by first investigator.

Placebo
Used

Assignment
Single

Health conditions studied

1

Description of health condition studied

Physical Fitness and Motivation

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

To determine pre and post heart rate and level of exertion of placebo in normal weight adolescents between and within the groups

Timepoint

30 minute interval between pre and post measurements

Method of measurement

Rate of Perceived Exertion Scale (RPE), Digital Pulse oximetry

2

Description

To determine pre and post physical fitness between and within the groups

Timepoint

30 minute interval between pre and post measurements

Method of measurement

Physical activity questionnaire for adolescents and children (PAQ-A & PAQ-C), Standing broad Jump test, Sit and reach test, Running 20m, Reduced cooper test

3

Description

To compare pre and post motivation of normal weight adolescents.

Timepoint

30 minute interval between pre and post measurements

Method of measurement

Physical Activity and Leisure Motivation Scale (PALMS)

Secondary outcomes

1

Description

To determine the physical activity of normal weight adolescents.

Timepoint

no interval

Method of measurement

Physical Activity Questionnaire for Adolescent (PAQ-A), Physical Activity Questionnaire for Children (PAQ-C)

Intervention groups
