### Efficacy of Cognitive Behavior Therapy for Perfectionism in Reducing Symptoms of Social Anxiety Disorder and investigation of process of change

#### Protocol summary

##### Study aim

In the present study, while examining the effectiveness of perfectionism-based cognitive-behavioral therapy on reducing perfectionist self-expression and symptoms of patients with social anxiety disorder, it is intended to address research questions related to the change process, such as whether the intervention It has a significant effect on changing the mediating variables of treatment, ie dysfunctional attitudes and perfectionist cognitions; What is the process of changing the symptoms of social anxiety, dysfunctional attitudes and perfectionist cognitions, and changes in mediating variables (dysfunctional attitudes and perfectionist cognitions) and changes in the sign (social anxiety and perfectionist self-expression)? What do they have to do with each other?

##### Design

The sampling method in this study is purposeful. The number of participants in the intervention and control groups was 23 and a total of 46 people were considered in the two groups.

##### Settings and conduct

Individual psychotherapy sessions will be held in one of the university rooms.

##### Participants/Inclusion and exclusion criteria

Inclusion criteria are: 1. Having social anxiety disorder based on structured interview based on DSM-5 2. Achieving a score of at least half the standard deviation above the average on the Hewitt Multidimensional Perfectionism Scale 3. Having a bachelor's degree. Exclusion criteria are: 1. Diagnosis of symptoms of psychosis 2. Diagnosis of severe borderline personality disorders, schizotypal, antisocial, and paranoid 3. Diagnosis of substance abuse disorder.

##### Intervention groups

The intervention of the present study is the cognitive-behavioral therapy of perfectionism that is performed on

the experimental group and the control group is compared with the experimental group.

##### Main outcome variables

Perfectionism; Social Anxiety; Perfectionistic Cognition

**Scientific title**  
Efficacy of Cognitive Behavior Therapy for Perfectionism in Reducing Symptoms of Social Anxiety Disorder and investigation of process of change

**Public title**  
Efficacy of Cognitive Behavior Therapy for Perfectionism in Social Anxiety Disorder

**Purpose**  
Supportive

**Inclusion/Exclusion criteria**

**Inclusion criteria:**

Development of social anxiety disorder based on DSM-5 structured interview Having a score of at least half of the standard deviation above the average in Hewitt Multidimensional Perfectionism Scale

**Exclusion criteria:**

Diagnosis of psychosis symptoms Diagnosis of severe borderline, schizotypal, antisocial, and paranoid personality disorders

**Age**

From **18 years** old to **40 years** old

**Gender**

Both

**Phase**

N/A

**Groups that have been masked**

*No information*

**Sample size**

Target sample size: **46**

**Randomization (investigator's opinion)**

Randomized

**Randomization description**

In this research, randomization was done as simple randomization. The names of the volunteers are placed in an envelope and then the names of 23 people are randomly separated, these people form the control group and the remaining people are in the intervention group.

**Blinding (investigator's opinion)**

Not blinded

**Description**

Perfectionism score

**Timepoint**

Every two weeks

**Method of measurement**

Hewitt Multidimensional Perfectionism Scale

**Intervention groups**

1

**Description**

Intervention group:Cognitive-behavioral therapy of perfectionism is a type of meta-diagnostic psychotherapy that tries to reduce the symptoms of other disorders by treating the variable of perfectionism.

**Category**

Behavior

## 2

### Description

Control group: To study the outcome of treatment, subjects in the control group are evaluated 3 times. The first evaluation is done as pre-test, the second evaluation is done 2 months apart from the first evaluation as post-test and the third evaluation is done after 3 months from the second evaluation as follow-up. They complete Social Phobia Inventory (SPIN), Hewiett Multidimensional perfectionism Scale (HMPS), and Perfectionist Self-presentation Scale (PSPS). To study mechanism of Change, control group every two weeks (after the initial evaluation until the second evaluation and a total of 4 times) complete Social Phobia Inventory (SPIN), Perfectionistic Cognition Inventory, and Dysfunctional Attitudes Scale (DAS) .
