Comparison of two suturing techniques on free gingival graft shrinkage

Protocol summary

Summary

The aim of this study was comparison of the effect of two suturing methods on shrinkage of free gingival graft. The study population was the patients referred to Kerman Dental School and needed gingival augmentation on canine or premolar teeth bilaterally. 10 patients were included in the study. The inclusion criteria were lack of systemic diseases, no smoking, not to take the medications affecting on periodontium such as nifedipine. The width of attached and keratinized gingiva, and probing depth were measured at baseline. With throwing a coin, the control and test sites were determined. Free gingival graft was performed on both control and test sites. After placing the graft on the bed, in control sites, interrupted and circumferential sutures were utilized. In test sites, other than these sutures, apical stretching and horizontal continuous sutures were used. After 1, 3, and 6 months, measurements were recorded again.

Scientific title

Comparison of two suturing techniques on free gingival graft shrinkage

Public title

Effect of suturing on gingival graft shrinkage

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Need to bilateral gingival augmentation; Lack of systemic diseases contraindicated periodontal surgery; Pregnancy; Breastfeeding; full mouth plaque index and bleeding index less than 20 percent. Exclusion criteria: Smoking; Taking medications affecting on periodontium such as phenytoin.

Age

No age limit

Gender

Both

Phase

Health conditions studied

1

Description of health condition studied

Gingival recession

ICD-10 code

K06.0

ICD-10 code description

Gingival recession

Primary outcomes

1

Description

width of keratinized gingiva

Timepoint

1,3, and 6 months after intervention

Method of measurement

with periodontal probe in millimeter

2

Description

Probing depth

Timepoint

1,3,6 month

Method of measurement

Periodontal probe

Secondary outcomes

1

Description

widthof attached gingiva

Timepoint

1,3,6 month

Method of measurement

periodontal probe

Intervention groups

1

Description

In control sites, Interrupted and circumferential suture techniques were used to stabilize the graft. In test sites, apical stretching and horizontal continuous suture techniques other than the control site sutures, were used to stabilize the graft.
