Comparative bioequivalence study of two different Metformin 1000mg formulations (Reihaneh Pharmaceutical Company & reference) in 24 Iranian volunteers

Protocol summary

Study aim

This study, as part of the curriculum of bioequivalence tests of domestic production, evaluates the bioequivalence of a 1000 mg Metformin tablet manufactured by Reihaneh Pharmaceutical Company with its reference sample

Design

Bioequivalency study of Metformin 1000 mg tablet (Reihaneh Pharmaceutical Company) and reference product of Glucophage are evaluated in 24 healthy volunteers. This study was cross-over, random, and double-blind.

Settings and conduct

This study is carried out in the central laboratory of the Hamadan School of Pharmacy. The 24 volunteers are randomly divided into two groups and are divided into two stages of the study. This study is double-blind and the recipient and analyzer will not be in the process of consuming the product. Blood samples will be collected from each volunteer at specified times for 24 hours. The method used to measure the amount of drug in the samples of volunteers will be performed using high-performance liquid chromatography and an infrared detector.

Participants/Inclusion and exclusion criteria

Ages 18 to 45 years, Real weight (TBW) in the range of + -20% ideal weight, Non-smoker

Intervention groups

Sustained release tablets of metformin formulated at Reihaneh Pharmaceutical company 2. Sustained release tablets of metformin formulated at Merck company (Glucophage)

Main outcome variables

Metformin plasma concentration; Area under the curve; Half-life time; Time to reach maximum plasma concentration; Maximum concentration

Scientific title

Comparative bioequivalence study of two different Metformin 1000mg formulations (Reihaneh Pharmaceutical Company & reference) in 24 Iranian volunteers

Public title

Bioequivalency study of two different Metformin formulations

Purpose

Health service research

Inclusion/Exclusion criteria**Inclusion criteria:**

24 healthy male and female volunteers will participate in this study Aged 18 to 45 years Based on laboratory safety tests No history of diseases affecting drug pharmacokinetic processes Lack of any chronic or acute medication at least 1 week before the start of the study Adherence to the criteria on the basis of moral obligation and signed an informed consent actual Weight (TBW) in the range of 20% IBW

Exclusion criteria:

Subject showed clinically relevant deviations from normal in physical examination Subject had undergone surgery of the gastro-intestinal tract Subject had donated a unit of blood or participated in another clinical trial, within the last three months before the first treatment Subject had a history of alcohol abuse or smokes more than 10 cigarettes per day Use any medication within 14 days before the first treatment A history of allergic to biguanides

Age

From **20 years** old to **45 years** old

Gender

- Care provider
- Data analyser

Sample size

Target sample size: **24**

More than 1 sample in each individual

Number of samples in each individual: **24**

Each participant in each study period will receive a single dose of test and reference formulations

Randomization (investigator's opinion)

Randomized

Randomization description

Each volunteer is identified by the number 1 to 24. The number assigned to each volunteer is based on the priority of being on the list when screening. Due to the cross-sectional study, 24 participants were assigned to test and reference products (groups A and B), respectively, using the Excel program rand command. Then, in the second stage, groups A and B will receive cross-reference and test drugs crosswise.

Blinding (investigator's opinion)

Double blinded

Blinding description

In this study, 24 volunteers were randomly divided into two groups of 12 test (A) and reference (B) drug recipients by Excel software. In this project, the volunteers, person responsible for blood sampling and analyzer are kept blind. To blind these people, all the information collected is coded to the researcher, and after the analysis is completed, codes will be opened.

Health and normal volunteers

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

Drug plasma concentration

Timepoint

blood samples were collected at 0, 0.5, 1, 1.5, 2, 3, 4, 6, 8, 10, 12 and 24 h following drug administration

Method of measurement

Using HPLC instrument

Secondary outcomes

1

Description

Pharmacokinetic parameters: Half-life, Cmax The peak plasma concentration of a drug after administration, The volume of distribution, and Clearance

Timepoint

0; 0.5; 1.0; 2.0; 3.0; 4.0; 4.5; 5.0; 5.5; 6.0; 6.5; 7.0; 8.0; 9.0; 10.0; 12.0; 16.0; 20.0; 24.0; 30.0 and 36 hours post-dose

Method of measurement

Drug analysis in plasma using a chromatographic apparatus and calculating pharmacokinetic parameters using pharmacokinetic models

Intervention groups

1

Description

Intervention group: Single dose of Glucophage 1000 mg tablet manufactured by Merck Pharmaceutical company in 24 healthy volunteers

Category

Treatment - Drugs

2

Description

Control group: Control group: Single dose of Metformin 1000 mg tablet manufactured by Reihaneh Pharmaceutical company in 24 healthy volunteers

Title and more details about the data/document

The pharmacokinetic data obtained from the study are for each volunteer in both the test and reference groups.

When the data will become available and for how long

6 months after the end of the study

To whom data/document is available

All researchers and clinical specialists

Under which criteria data/document could be used

There is no denial of access to data

From where data/document is obtainable

The results of the project are reported in the form of a published paper. Article will be available after it is published. If needs quicker access to the results, can reach us at "k.derakhshandeh@umsha.ac.ir"

What processes are involved for a request to access data/document

There will be no problem accessing results when publishing results in online articles. The wait time to access the results will be 3 months after the project is completed. If needs quicker access to the results, can reach us at "k.derakhshandeh@umsha.ac.ir".
