The effect of Bacopa monnieri extract on cognitive function and sleep quality in patients with mild cognitive impairment: a triple-blind clinical trial study

Protocol summary

Study aim

Determining the effect of Bacopa monnieri extract on cognitive function and sleep quality in patients with mild cognitive impairment (MCI).

Design

The study is a three-blind clinical trial (randomized control). The number of samples is 62. Using stratified random blocking method to identify groups in terms of gender (female / male), literacy level (diploma / undergraduate) and age (50-65 65<) are divided into two groups (intervention and control) Will take.

Medications will be placed separately in A-B packages.

Settings and conduct

The present study is a triple-blind clinical trial (randomized controlled trial) (blind patient, blind physician and data analyzer). According to the mentioned inclusion criteria, patients with MCI referred to the office of the project partner who score < 26 in the MOCA Test will enter the study after obtaining the informed consent of the patients.

Participants/Inclusion and exclusion criteria

1. Conscious written consent
2. No psychiatric, gastrointestinal and kidney diseases
3. Have a minimum literacy
4. Score less than 26 on the MOCA
5. Not participating in another clinical trial during the past 2 months prior to the start of this study and other complementary medicine and cognitive rehabilitation programs
6. Do not take antidepressants, anticonvulsants, hypnotics and muscle relaxants according to self-declaration
- 7- Have at least two vascular risk factors such as: hypertension, diabetes, Hyperlipidemia, obesity and consumption have tobacco
8. Age: 50 years<

Intervention groups

The intervention group was given 160 mg capsules of Bacopa dry extract orally twice a day for two months .The control group is given a placebo (containing the

same starch as the main drug).

Main outcome variables

In this study, the primary outcome of the study of cognitive function and the secondary outcome is the study of sleep quality.

Public title

The effect of Bacopa monnieri extract on cognitive function and sleep quality in patients with mild cognitive impairment

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Conscious written consent Have a minimum literacy rate Score less than 26 on the Montreal Cognitive Assessment Test Having at least two vascular risk factors such as: hypertension, diabetes, hyperlipidemia, obesity and consumption have tobacco Being 50 years old or older

Exclusion criteria:

No psychiatric, gastrointestinal diseases (such as irritable bowel syndrome, celiac disease, peptic ulcer) and kidneys Failure to participate in another clinical during the past 2 months prior to the start of this study and other complementary medicine and cognitive rehabilitation programs Do not take antidepressants, anticonvulsants, hypnotics and muscle relaxants on their own declarative

Age

From 50 years old

Gender

Both

Phase

Sample size

Target sample size: 62

Randomization (investigator's opinion)

Randomized

Randomization description

The present study is a triple-blind clinical trial (randomized controlled trial) (blind patient, blind physician and blind data analyzer). The randomization method is Stratified Random allocation. Its randomization unit is random blocks. Random layers including: gender, literacy and class age based on these variables as described by men / women, literacy level: diploma / undergraduate, age: 50 to 65.65 and above (50 to 65.65 and above) in two group (intervention and control) will be located. Randomization tool and how to create a random sequence: R software is a "blockrand" package.

Blinding (investigator's opinion)

Triple blinded

Blinding description

The drugs will be placed separately in A-B packages. Participants and the whole research group are unaware of the final stage of extracting the final information from the contents of the envelopes (A-B), so the present study will be done in triple-blind.

Health conditions studied

1

Description of health condition studied

mild cognitive impairment

ICD-10 code

F06.7

ICD-10 code description

F00-F09

Primary outcomes

1

Description

Evaluation of cognitive function using Montreal Cognitive Assessment questionnaire

Timepoint

Evaluation of cognitive function during the study in the pre-intervention, end of the first month and end of the second month of patients in person in the physician's

office.

Method of measurement

Evaluation of cognitive function using the Montreal Cognitive Assessment Questionnaire

Secondary outcomes

1

Description

Assess the quality of sleep

Timepoint

Evaluation of patients' sleep quality during the study in the pre-intervention, end of the first month and end of the second month in person at the physician's office

Method of measurement

Assessing patients' sleep quality using the Pittsburgh Sleep Quality Questionnaire

Intervention groups

1

Description

Intervention group: Participants were randomly assigned to take Bacopa Monnieri 160 mg standard extract orally twice daily for two months (1 with breakfast, 1 with dinner at 9 am and 9 pm 12 hours apart). It will be given.

Category

Treatment - Drugs

2

Description

Control group: Participants were randomized to placebo (containing starch equal to the main drug) orally twice a day for two months (1 with breakfast, 1 with dinner at 9 am and 9 pm). 12 hours apart) is given.

Category

Placebo
