Comparison of the effect of crystalline insulin and topical oxygen on pressure ulcer healing in patients admitted to intensive care units, a single-blind clinical trial

Protocol summary

Study aim

Determining and comparing the effect of crystalline insulin and topical oxygen in the healing of pressure ulcers in patients admitted to the intensive care units of Kashani Hospital in Shahrekord

Design

Clinical trial, Parallel, one-way blind, on 60 patients

Settings and conduct

3rd degree bed sores, hospitalized in the intensive care unit of Kashani Hospital in Shahrekord. There are three groups of topical insulin and topical and control oxygen. Face twice daily for two weeks, in the group with topical oxygen therapy in addition to routine treatment twice daily topical oxygen for 20 minutes and twice a day for 2 weeks and in the control group routine treatments including daily washing with normal saline. The wounds are then followed for two weeks.

Participants/Inclusion and exclusion criteria

1. Patients aged 19-65 years who have grade 3 pressure ulcer due to severe concussion (<GCS <8).
2. Do not suffer from organ failure
3. No diabetes, burns, chronic skin disease, diarrhea, vascular problems and hypoalbuminemia
4. No history of smoking, drug or alcohol addiction
5. Absence of infectious symptoms in the wound (swelling, redness around the wound and foul-smelling and purulent discharge)
6. Absence of cachexia symptoms (folds on the back of the arm, the patient's appearance, protrusion of the zygomatic arch and emptying of the temporal cavity)
7. Not taking systemic corticosteroids during the last year
8. The legal guardian of the patient has agreed to participate in the study and has signed the consent form.

Intervention groups

Three groups of recipient intervention: 1- Topical insulin: Insulin recipient with normal saline wash 2- Topical oxygen: Topical oxygen with normal saline wash 3- Control: Normal saline wash only

Main outcome variables

Wound degree Wound area The amount of discharge

Health conditions studied

1

Description of health condition studied

bedsore

ICD-10 code

L99

ICD-10 code description

Other disorders of skin and subcutaneous tissue in diseases classified elsewhere

Primary outcomes

1

Description

Bed wound healing rate

Timepoint

Before and after the effect of insulin and topical oxygen

Method of measurement

Graduated spatula

Secondary outcomes

1

Description

Wound discharge

Timepoint

After the intervention

Method of measurement

Consumable sterile gas

Intervention groups

1

Description

Intervention group 1: Topical crystal insulin treatment twice a day for two weeks for every 10 cm² of wound 4 units of regular insulin dissolved in one cc of normal saline and sprayed on the wound with an insulin syringe. Covered with camouflage.

Category

Treatment - Drugs

2

Description

"Intervention group 2": In addition to routine treatment with topical oxygen, they will receive twice daily topical oxygen at a rate of 10 liters per minute for 20 minutes

and twice a day for 2 weeks.

Category

Treatment - Drugs

3

Description

"Control group": Routine treatments include daily washing with normal saline and then the wound is covered with a conventional dressing (camphile) and followed for two weeks.

Category

Treatment - Drugs
