EFFECTS OF SINGLE TASK TRAINING VERSUS DUAL TASK TRAINING ON BALANCE AND COGNITION IN OLDER ADULTS

Protocol summary

Berg balance scale; Time up and go test; Mini Mental State Examination; Montreal Cognitive Assessment

Study aim

To determine the effect of single task training versus dual task training on balance and cognition in older adults

Design

A concealed, randomized, double blinded trial

Settings and conduct

Study will be conducted at Najjat trust old home Rawalpindi, Pakistan.

Participants/Inclusion and exclusion criteria

Inclusion criteria: both male and female; age of the participants between 50 years and above; able to walk independently without assistive devices; Mini-Mental State Examination (MMSE) score between 18 to 23; Berg balance scale score less than 50. Exclusion criteria: participant who had recent history of fall within one year; unstable medical condition; significant visual and auditory impairments; unwillingness for participation in the study; presence of other neurological or musculoskeletal conditions affecting balance.

Intervention groups

Control group: participants will perform functional tasks that require balance like, tandem standing with eyes open and closed, transferring from one chair to another chair, single leg standing on alternate legs, walking with a reduced base of support, obstacle crossing. Participants will perform the training 3 days a week for up to 8 weeks; 5 minutes warm up followed by 30 minutes training session and 5 minutes cool down. Treatment group: participants will perform balance tasks like, tandem standing with eyes open and closed, transferring from one chair to another chair, single leg standing on alternate legs, walking with a reduced base of support, obstacle crossing simultaneously with cognitive task. Participants will perform the training 3 days a week for up to 8 weeks; 5 minutes warm up followed by 30 minutes training session and 5 minutes cool down.

Scientific title
EFFECTS OF SINGLE TASK TRAINING VERSUS DUAL TASK TRAINING ON BALANCE AND COGNITION IN OLDER ADULTS

Public title
EFFECTS OF SINGLE TASK TRAINING VERSUS DUAL TASK TRAINING ON BALANCE AND COGNITION IN OLDER ADULTS

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Both male and female participants of age 50 years and above Able to ambulate independently walk without assistive devices Mini-Mental State Examination (MMSE) score between 18 to 23 Berg balance scale score less than 50
Exclusion criteria:
Participant who had recent history of fall within one year Unstable medical condition Significant visual and auditory impairments Presence of other neurological or musculoskeletal conditions affecting balance Unwillingness for participation in the study

Age
From **50 years** old

Gender
Both

Phase
N/A

Groups that have been masked

- Participant
- Outcome assessor

Sample size
Target sample size: **68**

Randomization (investigator's opinion)
Randomized

Randomization description
The subjects will be randomly divided into 2 groups (experimental and control group) by sealed envelope method using convenient sampling technique and informed consent will be taken from each patient who willing to participate in the study.

Blinding (investigator's opinion)
Double blinded

Blinding description
Participants of both control and experimental group as well as the person who will assess the outcomes before and after application of intervention.

Placebo
Not used

Assignment

Health conditions studied

1

Description of health condition studied

Balance and cognition in older adult

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Balance

Timepoint

Before intervention and after 8 weeks post intervention.

Method of measurement

Berg balance scale, Timed up and go test.

2

Description

Cognition

Timepoint

Before intervention and after 8 weeks post intervention.

Method of measurement

Mini mental state examination , Montreal Cognitive Assessment

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Dual task training group participants will perform balance tasks like, tandem standing with eyes open and closed, transferring from one chair to another chair, single leg standing on alternate legs, walking with a reduced base of support, obstacle crossing simultaneously with cognitive task. Participants will perform the training 3 days a week for up to 8 weeks; 5 minutes warm up followed by 30 minutes training session and 5 minutes cool down.
