

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

Evaluation and comparison of surgical outcomes of frenectomy in infants with ankyloglossia using electrocautery or surgical in Tabriz pediatric hospital

Protocol summary

Study aim

Determination of complications of phryntomy (bleeding, infection, movement limitation and tongue dysfunction) in neonates with ankylosing spondylitis using electrocautery and incision surgery

Design

Clinical trial with control group, with parallel, non-blind, simple randomized groups, on 20 patients. Excel software rand function was used for randomization.

Settings and conduct

Sampling is done after receiving the code of ethics from the university ethics committee. Patients will be randomly selected from patients referred to the ENT surgery clinic of Tabriz Children's Hospital. Diagnosis is by clinical examination and parental history. Patients will be selected based on the criteria of admission (parental consent and definitive diagnosis with history and clinical examination) and exclusion (unwillingness to continue treatment at any stage) and will be randomly divided into one of two groups A and B.

Participants/Inclusion and exclusion criteria

Age 6 months to 2 years; No previous procedure for ankyloglossia; Acceptance of research terms and procedures by parents; Lack of effective oral and tongue disease in the study results; Diagnosis of Ankyloglossia

Intervention groups

Intervention group: Using electrocautery (instead of surgery) for tongue phrenctomy. This method is safer and faster and has fewer complications Control group: Patients in this group undergo traditional surgical phrenctomy.

Main outcome variables

Freedom of tongue movement in the mouth; Improves infant feeding

General information

Reason for update

Reducing the number of samples from 60 to 40. Due to the conditions and the spread of Covid-19

Scientific title
Evaluation and comparison of surgical outcomes of frenectomy in infants with ankyloglossia using electrocouter or surgical in Tabriz pediatric hospital

Public title
Evaluation and comparison of surgical outcomes and complications of frenectomy in infants with ankyloglossia using electrocouter or surgical in Tabriz pediatric hospital

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
 age 6 months to 2 years No previous procedure for ankyloglossia Acceptance of research terms and procedures by parents Lack of effective oral and tongue disease in the study results Diagnosis of Ankyloglossia
Exclusion criteria:
 Age above 2 years Previous surgery on the tongue Severe adhesion of the tongue to the floor of the mouth Another severe underlying disease

Age
From **6 months** old to **2 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
Patients will be randomly assigned to intervention and control groups. Patients are distributed in two groups (random sequence) using a table of random numbers. Patients are divided between the two groups by announcing the number of patients in the clinic. Odd numbers in one group and even numbers in the second group. Patients are selected in the clinic of Tabriz Children's Hospital

Blinding (investigator's opinion)
Not blinded

Blinding description

Placebo
Not used

Assignment

Health conditions studied

1

Description of health condition studied

Ankyloglossia

ICD-10 code

Q38.1

ICD-10 code description

Ankyloglossia

Primary outcomes

1

Description

Answer to surgical or electrocautery treatment of the tongue ferronolum

Timepoint

6 months

Method of measurement

Physical examination

Secondary outcomes

1

Description

Good baby nutrition

Timepoint

6month and 1 year

Method of measurement

Weighing

Intervention groups

1

Description

Intervention group: Electrocautery. In this group of patients, the patient's tongue follicle is removed using the cauterization device in the operating room of Tabriz Children's Hospital. The cutter degree is set to cut 8. The incision is performed by the surgeon in one session and after the end of the work, the patient is monitored for recovery from bleeding under the tongue and edema.

Category

Treatment - Surgery

2

Description

Control group: surgery. In this group, patients undergo tongue follicle resection by traditional surgical method after general anesthesia using anesthesia and restoration with 0.4 vicryl suture. It is controlled for bleeding under the tongue and edema.
