

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Comparison of the effectiveness of time management and resilience training on work- family conflict and psychological distress of female nurses

Protocol summary

Study aim

Determining the effectiveness of time management and resilience training on family work conflict and psychological distress of female nurses

Design

Three arm parallel group randomized trial without blinded will be conducted on 198 nurses (66nurse in each group). Randomization will be done with SPSS software.

Settings and conduct

Participants will be nurses and nurse assistance from all hospitals in Bushehr province. Participants will be randomly divided into three groups. One group will be instructed time management and the other resilience and there will be no intervention for the third group. Educational intervention will be virtual (Online).

Participants/Inclusion and exclusion criteria

Inclusion criteria: Female nurse working in clinical wards; living with a spouse; At least 6 months of nursing experience; Score higher than the middle of the work-family conflict questionnaire. Exclusion criteria: Taking any type of neuroleptics according to the individual; Having a mental illness under the supervision of a psychiatrist on a self-reported basis; Having a stressful event in the last six months

Intervention groups

In the initial of study, 3 groups complete the work family conflict and psychological distress. Among the 2 intervention groups, one group will be instructed time management and another resilience. The control group dose not receive any instruction. After end of the instruction and one month later three groups will complete family conflict and psychological distress questionnaires.

Main outcome variables

Family work conflict; Psychological distress

Primary outcomes

1

Description

Work-Family Conflict

Timepoint

Before the intervention and immediately after completing the intervention and one month later

Method of measurement

Work-family conflict of married women questionnaire (Bagherzadeh. 2016) will be used.

Secondary outcomes

1

Description

Psychological distress

Timepoint

Before the intervention and immediately after completing the intervention and one month later

Method of measurement

Psychological distress questionnaire (Kessler K-10 psychiatric) will be used.

Intervention groups

1

Description

Resilience training group (intervention 1): Before the intervention the pretest will be given (work- family conflict and psychological distress questionnaires will be completed) then 8 virtual session of resilience education will be held. After intervention and a month later work- family conflict and psychological distress questionnaires will be completed again.

Category

Behavior

2

Description

Time management training group:(intervention 2): Before the intervention, the pretest will be given (work- family conflict and psychological distress questionnaires will be completed) then 8 virtual session of time management education will be held. After intervention and a month later work- family conflict and psychological distress questionnaires will be completed again.

Category

Behavior

3

Description

Control group: No intervention is performed. Questionnaires are completed in parallel with the two intervention groups
