Comparing effect of standard treatment with turmeric pomade on healing of diabetic foot ulcers

Protocol summary

Summary

The aim of this randomized double blind trial is to compare the effect of standard treatment with turmeric pomade on healing of diabetic foot ulcer. In this study, 50 diabetic patients having inclusion criteria will be randomly placed in the intervention or control group. The patients in the intervention group will receive turmeric, one applicator daily for a year. The patients in the control group, however, will receive placebo in a similar dose and shape. To evaluate response to treatment, we will consider the grade and diameter of the wound.

Health conditions studied

1

Description of health condition studied
Diabetes Mellitus
ICD-10 code
E10, E11,
ICD-10 code description
Insulin-dependent diabetes mellitus, Non-insulin-
dependent diabetes mellitus, Malnutrition-related
diabetes mellitus, Other specified diabetes mellitus,
Unspecified diabetes mellitus

Primary outcomes

1

Description
Wound healing
Timepoint
Over a year
Method of measurement
Decline of wound grade (Wound depth reduction)

Secondary outcomes

empty

Intervention groups

1

Description
An applicator of Turmeric pomade, daily for a year
Category
Treatment - Drugs

2

Description
An applicator of placebo pomade, daily for a year
Category
Placebo
