

Clinical Trial Protocol

Iranian Registry of Clinical Trials

11 Jul 2026

Evaluation of bone loss in patients treated with Iranian implant 3A: An uncontrolled clinical trial

Protocol summary

Study aim

Clinical and radiologic evaluation of 3A Iranian implant system

Design

This study is a phase 2 clinical trial study . 76 implants will be studied and patients will be admitted to the study voluntarily and non-randomly from individuals over 18 years of age.

Settings and conduct

This study will be conducted in Implant Research Center Tehran University of Medical Science. 3A implant will be inserted in the proper location and chlorhexidine 0.2% and Gelofen 400 mg will be prescribed for patients. Immediately after surgery and 3 month later(before prosthesis delivery) implant's stability will be assessed by Ostell mentor. Clinical evaluation(including pocket depth, plaque index, bleeding on probing and presence of Pus) will be done in 3,6 and 12 month post surgery. One week after surgery(after suture removal), 3, 6 and 12 months later parallel periapical radiography will be taken. Finally radiography will be evaluated for mesial and distal bone resorption by radiologist.

Participants/Inclusion and exclusion criteria

inclusions criteria: Short 3 unit bridge or single edentulous; 1 mm bone around implant exclusion criteria: 1/need of augmentation around implant; 2/presence pus; 3/ heavy smoker; 4/ uncontrolled diabetes or another diseases;

Intervention groups

3A implant with proper size with 1 millimeter bone around implant will be used.

Main outcome variables

pocket depth; bleeding on probing; plaque index; bone loss; Implant stability

Scientific title

Evaluation of bone loss in patients treated with Iranian implant 3A: An uncontrolled clinical trial

Public title

evaluation of dental implant 3A

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Single edentulous or short 3-unit bridge The presence of one millimeter bone around the implant

Exclusion criteria:

the need of augmentation in implant region presence of pus in implant region heavy smoker uncontrolled diabetes or any systemic diseases bisphosphonate usages active periodontal disease bruxism and clenching pregnancy

Age

From **18 years** old

Gender

Both

Phase

2

Health conditions studied

1

Description of health condition studied

Single edentulous or three-unit bridge

ICD-10 code

K08.1

ICD-10 code description

Complete loss of teeth

Primary outcomes

1

Description

bone loss

Timepoint

Immediately, 3,6 and 12 month after surgery

Method of measurement

periapical radiography

Secondary outcomes

1

Description

pocket depth

Timepoint

3,6 and 12 months after surgery

Method of measurement

periodontal probe

2

Description

bleeding on probing

Timepoint

3,6 and 12 months after surgery

Method of measurement

periodontal probe

3

Description

plaque index

Timepoint

3,6 and 12 months after surgery

Method of measurement

periodontal probe

4

Description

implant stability

Timepoint

Immediately, 3 months after surgery (before prosthesis delivery)

Method of measurement

Implant stability measuring device (Osstell)

Intervention groups

1

Description

Intervention group: Iranian Dental Implant 3A Surgery produced by Dorinkasht mana
