Iranian Registry of Clinical Trials

28 Jun 2026

Evaluation of safety and antiviral effect of Sakarya-20 inhaled solution containing fuzzy nanoparticles on the recovery of patients with Covid-19

Protocol summary

Study aim

Determination of safety and efficacy of Sakarya-20 inhalation solution as antiviral therapy in COVID-19 patients

Design

This study is a pilot single assignment clinical trial and add-on design study, in which patients receive Sakarya-20 inhalation solution in addition to standard treatment. The patients who refer to the emergency department of Azad University hospitals due to COVID-19 disease were evaluated by a physician in terms of inclusion and non-inclusion criteria and after completing the consent form Letters (by the patient, guardian or guardian) are randomized using the random number method and entered into the project in a treated or controlled grouping.

Settings and conduct

The trial is performed in Farhikhtegan Hospital of Azad University based on open single assignment pilot clinical trial. This study is open labeled clinical trial (there is no need for blindness and randomization).

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age above 18 years, Having a number of clinical signs of coronary heart disease by a specialist, Confirmation of the disease by diagnostic test PCR-viral load test. Inclusion criteria: Age under 18, need to be hospitalized, Consumption of any other pharyngeal inhaler, pregnancy and lactation

Intervention groups

Ten patients were enrolled in the study and all patients take Sakarya-20 pharyngeal inhalation solution along with standard treatments. The method of administration is that the patient first inhales 0.5 cc every 8 hours for two days, and from the third to the ninth day 0.5 cc solution once a day.

Main outcome variables

Virus clearance

General information

Reason for update

Increase the number of patients from 10 to 14, according to the judges

Scientific title

Evaluation of safety and antiviral effect of Sakarya-20 inhaled solution containing fuzzy nanoparticles on the recovery of patients with Covid-19

Public title

Evaluation of the effect of Sakarya-20 in the treatment of Covid disease - 19

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Admission of Covid-19 patients over 18 years of age who are diagnosed based on a number of clinical coronary symptoms (dry cough, fever, headache, sore throat, lymphopenia or thrombocytopenia) by a physician and confirmed by PCR-viral diagnostic test load test (swallowing of the throat and nose) is performed in the laboratory. COVID-19 patients with mild to moderate disease who do not need to be admitted to the coronary ward (no lung involvement or very little involvement confirmed by CT scan) are included in the study if they are satisfied.

Exclusion criteria:

Age under 18, Lung involvement (need to be hospitalized), malignant tumor and other acute systemic diseases, co-infection with HIV, tuberculosis, history of asthma, asthma-like attacks and respiratory problems, life-threatening comorbidity Consumption of any other pharyngeal inhaler, pregnancy and lactation

Intervention groups

1

Description

Intervention group: Patients take Sakarya-20 pharyngeal inhalation solution along with standard treatments.

Sakarya-20 contains: a complex of nanoparticles (gold, silver and iron) with a total concentration of 40 ppm soluble in water manufactured by Hayyan pharmaceutical company. The method of administration is that the patient first inhales 0.5 cc every 8 hours for two days, and from the third to the ninth day 0.5 cc solution once a day.
