The effect of spiritual self-care on Stress and loneliness in first grade high school girls

Protocol summary

Study aim

Determining the effect of implementing a program to promote the spiritual health of stress and loneliness of high school girls in Gorgan in the year 1400

Design

This study has two groups of control and intervention. The sample size is 30 students for the intervention group and 30 students for the control group. In this study, the study plan is parallel.

Settings and conduct

Spiritual self-care training will be conducted on 30 teenage female students in a WhatsApp virtual group.

Participants/Inclusion and exclusion criteria

Inclusion criteria 1. Age group 14 to 16 years 2. Sex of the girl 3. Achieve a score of at least 140 and above the stress criterion 4. Achieve a score of at least 40 or higher from the criterion of feeling lonely 5. No psychiatric disorder or use of psychiatric medication Exclusion criteria 1. Occurrence of a stressful accident during the last 6 months 2. Not participating in two session

Intervention groups

In the intervention group, 8 sessions of 40 minutes (twice a week) of spiritual self-care training will be performed. In the control group, they do not receive training from the researcher and the procedure is performed routinely.

Main outcome variables

Feeling lonely Stress

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization will be done in cluster randomization. Gorgan has 12 high schools. One high school from each region will be selected randomly. In each high school, the participants will be selected as a quota for the population of that area and they will be contacted for research. In the second stage, stratified randomization will be divided into intervention and control groups. Because of the scatter of samples in each high school and also the possibility of heterogeneity in some of the basic features in the groups, the classified randomization program will be used. In this study, the samples were based on the high school centers

Blinding (investigator's opinion)

Not blinded

ICD-10 code description

Generalized anxiety disorder

Primary outcomes

1

Description

Feeling lonely is an unpleasant condition that results from the difference between the relationship between the person that people tend to and the relationship that they have with others in real situations. This feeling is important because it is associated with both negative emotions and social poverty in adults, adolescents and children.

Timepoint

loneliness before the intervention, immediately after the intervention

Method of measurement

Intervention groups

1

Description

Intervention group: For the intervention group, after introducing the research and conducting the pre-test, 8 40-minute sessions (twice a week) of spiritual self-care sessions will be held. These interventions are in four areas: communication with God, communication with oneself, communication with others, and connection with the created world. The activities of the sessions will be: 1. Checking the pre-session assignments of the participants that have been assigned to them. 2. Giving

feedback to the participants by the researcher 3. Listing and summarizing the previous material to make a connection between the discussed material and creating mental preparation of the participants for the new discussion 4. Doing new exercises 5. Giving homework for the next sessions 6 Explain the explanations and conclusions about the topic of the meeting. Codified trainings will be organized by the researcher in the form of lectures and webinars along with slide shows, group discussions in cyberspace and presentation of assignments.
