The effects of probiotics administration on acute side effects of chemotherapy regimens in gastroesophageal cancer patients

Protocol summary

Study aim

The effects of probiotics administration on acute side effects of chemotherapy regimens in gastroesophageal cancer patients

Design

A randomized, parallel, with a control group, double-blinded, phase 3 of 42 patients. Rand software in Excel was used for randomization.

Settings and conduct

In the oncology ward of Rajaie hospital with a standard questionnaire, based CTCAE , double-blinded(patient and researcher)

Participants/Inclusion and exclusion criteria

Patients with gastroesophageal cancer stage 3,4 who had chemotherapy(dcf,folfox)-induced side effects and were older than 18 with first-grade tumor. Patients with severe systematic disease (such as heart, kidney, and liver) or previously had chemotherapy or were given antibiotics and probiotics were excluded.

Intervention groups

Patients with stage 3,4 esophageal cancer who receive dcf folfox will get probiotics till the end of their chemotherapy period and will be reviewed in comparison to the control group with a standard questionnaire.

Main outcome variables

Age, Sex, Cancer, Probiotic

Sample size

Target sample size: **42**

Randomization (investigator's opinion)

Randomized

Randomization description

Participants were randomly assigned to receive either probiotic (n = 21) or nothing (control = 21) based on randomized block randomization and stratified randomization. Closed pockets were used to hide the randomization process, which was opened at the time of the patient's visit to minimize the gap between randomization and drug or control.

Blinding (investigator's opinion)

Double blinded

Blinding description

Randomization and allocation will be concealed from the researchers and participants until the final analyses will be completed. Another person who is not involved in the trial and not aware of random sequences, will be assigned the participants to the numbered pockets of capsules.

ICD-10 code description

Primary outcomes

1

Description

Evaluation of side effects of chemotherapy in patients with gastroesophageal cancers

Timepoint

Duration of chemotherapy

Method of measurement

Standard questionnaire based CTCAE

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Patients will be given probiotics ("DailyEast", Zist Takhmir) once a daily during their chemotherapy.

Category

Prevention

2

Description

Control group: Patients will be given their standard drugs during chemotherapy.
