The effect of platelet-rich plasma on pain and size of oral lichen planus

Protocol summary

Study aim

- Determination the effect of platelet-rich plasma injections and triadent oral paste on the VAS and Thongpressam scale of patients with oral lichen planus on day 0, 7,14, 30, 60

Design

Clinical trial phase 1-2 with control group, with parallel groups, randomized trial with double blinded outcome assessment on 15 patients. block randomization will be used.

Settings and conduct

This study will be done on patients with oral lichen planus lesions who will be referred to Oral and Maxillofacial Disease Department of Shiraz Dental School. In one side of intervention group, the paltelet rich plasma and triadent will be prescribed and for control side just triadent. The assessor of outcomes and statistical analysor will be blinded to the type of prescribed medication.

Participants/Inclusion and exclusion criteria

Inclusion: The patients with histopathology and clinically conformed atrophic or erosive oral lichen planus

Exclusion: The patients with history of other inflammatory diseases, malignancies or even dysplastic lesions

Intervention groups

Intervention group: The prepared PRP will be injected around the lesion and intra lesion with anesthesia by insulin syringe twice (once every week) during first two weeks beside twice in a day use of triadent oral paste 0.1% (Raha Pharmaceutical company- Iran) .The VAS and thongpressom scale will assed the pain, size (days 0, 7, 14, 30, 60). Control group: The patient with two-sided OLP will be under routine treatment during the study. Both sides OLP lesions will be treated by triadent oral paste 0.1% (Raha Pharmaceutical company- Iran) twice in a day. The lesion on control side will only receive triadent. The VAS and thongpressom scale will assed the pain, size on days 0, 7, 14, 30, 60.

Main outcome variables

Pain, size

Scientific title

The effect of platelet-rich plasma on pain and size of oral lichen planus

Public title

The effect of platelet-rich plasma on oral lichen planus

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

The patients with atrophic or erosive oral lichen planus
The patients with histopathology and clinically conformed lichen planus
The patients who will be referred to Oral and Maxillofacial Disease Department of Shiraz Dental School

Exclusion criteria:

The patients with history of other inflammatory diseases
pregnant women
The patients with history of malignancies or even dysplastic lesions
The patients who have received treatment for oral lichen planus lesions since a previous month
pregnant women

Age

From **18 years** old

Gender

Both

Phase

1-2

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size

Target sample size: **15**

More than 1 sample in each individual

Number of samples in each individual: **2**

The patients with two-sided atrophic or erosive oral lichen planus, two different intervention will be done on lesions of each side

Randomization (investigator's opinion)

Randomized

Randomization description

Each block with 4 allocations, consisting 2 allocation for intervention and 2 for control group will be considered. Six possible sequence of treatment allocation in each block will be listed and each one will be written on a card. Each time a block will be selected and the sequence of treatment will be registered until the treatment allocations become completed for all 30 participants (8 blocks). The randomization was performed by a methodologist. Allocation concealment will be done by the main researcher. On each 30 cards a sequence will be written and sealed. Pockets will be put in a box. A pocket will be allocated for each participant based on order of enrollment.

Blinding (investigator's opinion)

Double blinded

Blinding description

The outcome assessor, patient and data analyzer will be blinded to the type of prescribed medication.

Description

Intervention group: The prepared PRP will be injected around the lesion and intra lesion with anesthesia by insulin syringe. The injections will be performed twice (once every week) during first two weeks (days 0, 7, 14, 30, 60). Follow up sessions are weekly until the end of the second month (days 0, 7, 14, 30, 60). The VAS and thongpressom scale will assed the pain, size. The patient with two-sided OLP will be under routine treatment during the study. Both sides OLP lesions will be treated by triadent oral paste 0.1% (Raha Pharmaceutical company- Iran) twice in a day. The lesion on intervention side will receive PRP in addition to triadent. All participants will also be prescribed for 40 drops of Nystatin oral drop 100000U (Emad Darman Pars- Iran) twice in a day.
